Buffers:
The buffer tracts for the residential area as indicated on this plan will consist of natural vegetation where possible, enhanced to 80% opacity where needed. Where site grading requires the removal of natural vegetation, a vegetative buffer will be landscaped within the buffer tract consisting of vegetation and opacity consistent with county standards. Width and types of buffers are as shown on the plan.

Flood Plain:
The project is located on Federal Emergency Management Agency (FEMA) Flood Insurance Rate Map (FIRM) Community Panel 12053C 093D effective date February 2,2012. the property contains both Flood Zone Areas A and AE with base elevations of 77.6' on the south and 93.5' on the north.

Fire protection:
Fire hydrants will be placed throughout the community at a minimum of 250' curb line distance Intervals which is consistent with county standards. The potable water system will be designed to provide a minimum of 1,000 GPM for use in firefighting as required by NFPA guidelines as required by Hernando County.

Homeowner's association documents will be in place to restrict the construction of permanent walls that preclude access to the side yards. Fencing will be allowed to the mid-point of the side yard of the home If constructed with a minimum 36-inch gate in which to access the rear yard.

General notes
1. This is a planning document and is not to be considered a final design or construction plan; also, not intended for recordation in public records. Drainage and utility easements will be included in the final construction plans and shall meet the requirements of Hernando County and any agencies having jurisdiction related to this project.
2. Drainage retention area(s) are conceptually located, the actual size and location will be determined with final engineering design.
