A CONTRACTOR OF THE CONTRACTOR

Shady Oaks Project, LLC Zoning Amendment Petition

From Agriculture (AG) to Planned Development Project (Residential) (PDP (RES))

Key Nos 1150471 & 1078862

Dear Omar:

Re:

Please be advised that I represent Shady Oaks Project, LLC, with regard to the above-referenced matter. Enclosed is our Zoning Amendment Petition regarding the same. Also enclosed, are the several items required to be submitted along with the Petition, as follows:

- 1. A copy of the *Warranty Deed* from Shady Oaks North, LLC, to Shady Oaks Project, LLC, dated October 21, 2024, and recorded in Official Records Book 4484, at Pages 887~889, of the Public Records of Hernando County.
  - a. Also enclosed, are the Property Appraiser's Property Record Card for each of the two (2) parcels. You will note that the parcel with Key Nº 1078862 is shown by the Property Appraiser to be owned by Shady Oaks North, LLC, but, in fact, that parcel is part of the metes and bounds description of Parcel 5 in the deed, which apparently has not been picked up by the Property Appraiser.
  - b. Further enclosed, is a copy of a survey dated October 4, 2024, by Simmons, Beall, and Trebour, LLC, showing that parcel to be included in Parcel 5 of the survey, which corresponds to Parcel 5 as described in the deed (two copies of the survey are enclosed, one being in 8.5" x 11" format, and the other being in 11" x 17" format).
- 2. Shady Oaks Rezoning Application Planned Development Narrative, dated January 30, 2025, by Florida Design Consultants, Inc., with Exhibits:
  - a. Cursory Listed Species Review; Horner Environmental, May 28, 2024;

Mr. C. Omar DePablo, Director Hernando County Planning Department February 5, 2025 Page 2

- b. Environmental Review; Horner Environmental, August 15, 2024;
- c. US 301 Improvements; Florida Department of Transportation;
- d. Utility Availability Letter; Hernando County Utilities Department; and
- e. Transportation Methodology and Assessments; Lincks & Associates.
- 3. Two (2) copies of the proposed PDP Master Plan, one of which is in 8.5" x 11" format, and the other of which is in 11" x 17" format;
- 4. A map and list of adjacent property owners lying within 500 feet of the subject property. The APO information has previously been sent to you by the Property Appraiser's office. Unfortunately, Parcel A of Talisman Estates East (Key No. 1078862), was not included in our original request to the Property Appraiser, resulting in a second request, which included that parcel. It is the revised APO map and list, including that parcel, which is enclosed herewith.
- 5. Finally, there is enclosed a check from Shady Oaks Project, LLC, for \$2,489.64 in payment of your filing fee, together with a copy of the Fee Calculation Sheet. The fee is calculated based on the 82.47 (MOL) acres reflected on the survey, notwithstanding that the Property Record Cards reflect a total of 85.70 acres for the two (2) parcels.

The instructions for submitting a Zoning Amendment Petition require that the petitioner identify all homeowners' associations to which property within the notification perimeter is subject. The instructions indicate that the Planning Department can assist in identifying such associations, and we have made inquiry to the Department, but have not yet received a reply.

We have made a diligent search of appropriate databases, but can find no record of there being an active homeowners' association within the notice area. The subject property borders the north and east boundaries of Talisman Estates East, Phase 1, the plat of which is dedicated to Talisman Homeowners' Association, Inc., but no record can be found of any such HOA ever being established, or of any documentation thereof being recorded. We have requested, but have not yet received, a public records search in that regard. Two (2) copies of that plat, one in 8.5" x 11" format, and one in 11" x 17" format, are enclosed for your information.

As your file will reflect, on August 9, 2024, we had a pre-application conference with Cayce Dagenhart, then of your office. We discussed various aspects of this matter, in conjunction with a preliminary Master Plan designed for the development of the 196 single-family lots previously

Mr. C. Omar DePablo, Director Hernando County Planning Department February 5, 2025 Page 3

approved, in 1985, for this property (see your file Nº H-85-58). We further explained to her our proposal for the deviations recited in the narrative statement. Ms. Dagenhart had no negative comments, but, pursuant to her suggestions, we have made modifications to the final iteration of the Master Plan; mostly by providing additional buffering.

The lot discussed in Paragraph 4., above, was not included in the 1985 rezoning, and was not included in the draft Master Plan discussed with Ms. Dagenhart. However, it is not being utilized to increase the number of single-family lots requested by this Petition; instead it has been added to the buffer.

Please confirm that the Petition package is complete. If so, we will appreciate your processing of this matter for presentation to the Planning and Zoning Commission and, thence, to the Board of County Commissioners.

In the meantime, if you believe that additional matters need to be discussed in a post-application conference with the applicant, please let us know.

Very sincerely yours,

JOSEPH M. MASON, JR.

Mr. Ernie Lane Hernando County 1400 North Boulevard Tampa, FL 33607

Re: Shady Oaks

Lincks Project No. 24124

Dear Mr. Lane,

The purpose of this letter is to establish the methodology to be utilized for the Transportation Analysis for the proposed development located south of SR 50 and east of US 301 in Hernando County, Florida, as shown in Figure 1.

The developer proposes to develop the subject property for 196 Single Family Homes.

The following outlines the methodology to be utilized in this analysis:

### **Trip Generation**

The trip rates to be utilized in the analysis will be obtained from the latest computerized version of "OTISS" which utilizes the Institute of Transportation Engineers' (ITE) <u>Trip Generation Manual</u>, 11<sup>h</sup> Edition, 2021, as its data base. Table 1 provides the trip generation for the proposed land use.

#### Distribution

The distribution will be based on the existing development patterns in the vicinity of the project. Figure 2 illustrates the proposed project traffic distribution.

#### Study Network

The study network will include those roadways in which the PM peak hour project traffic consumes 5% or more of the peak hour adopted Level of Service capacity for the roadways within the vicinity of the project.

Based on the results shown in Table 2, the study network will include the following roadways:

- Treiman Boulevard from Pasco County to Cortez Boulevard
- Cortez Boulevard from McKethan Road to Treiman Boulevard

(1) Source: Hernando County Tier I spreadsheet.

Mr. Ernie Lane November 27, 2024 Page 6

#### Buildout

Buildout of the project is anticipated to be 2030.

#### **Background Traffic**

The 2030 background traffic to be utilized in this analysis will be calculated as follows:

- 1) Lincks & Associates, LLC will conduct AM (7:00 to 9:00) and PM (4:00 to 6:00) peak hour turning movement counts at the following intersections:
  - a. Treiman Boulevard and Cortez Boulevard
  - b. Cortez Boulevard and McKethan Road
- The existing counts will be adjusted to the peak season based on the 2023 FDOT Peak Season Adjustment Factors for Hernando County.
- 3) The peak season traffic will be increased by the annual growth rate for each segment contained in the Hernando County Tier I spreadsheet

### Signal Timings

The existing signal timings will be utilized for the intersection analysis.

### **Analysis Scenario**

Intersection analysis shall be conducted based on HCS and/or SYNCHRO methodology for the following scenarios:

- 2030 background plus project traffic with budgeted geometry and signal timings.
  If the intersection operates at or above the adopted level of service, then no
  additional analysis is required.
- 2030 background with the improvements required to allow the intersection to operate at the adopted level of service.
- 2030 background plus project traffic with the background improvements identified in #2 above.
- 4) 2030 background plus project traffic with any additional improvements required beyond the background traffic to allow the intersection to operate at an acceptable level of service.

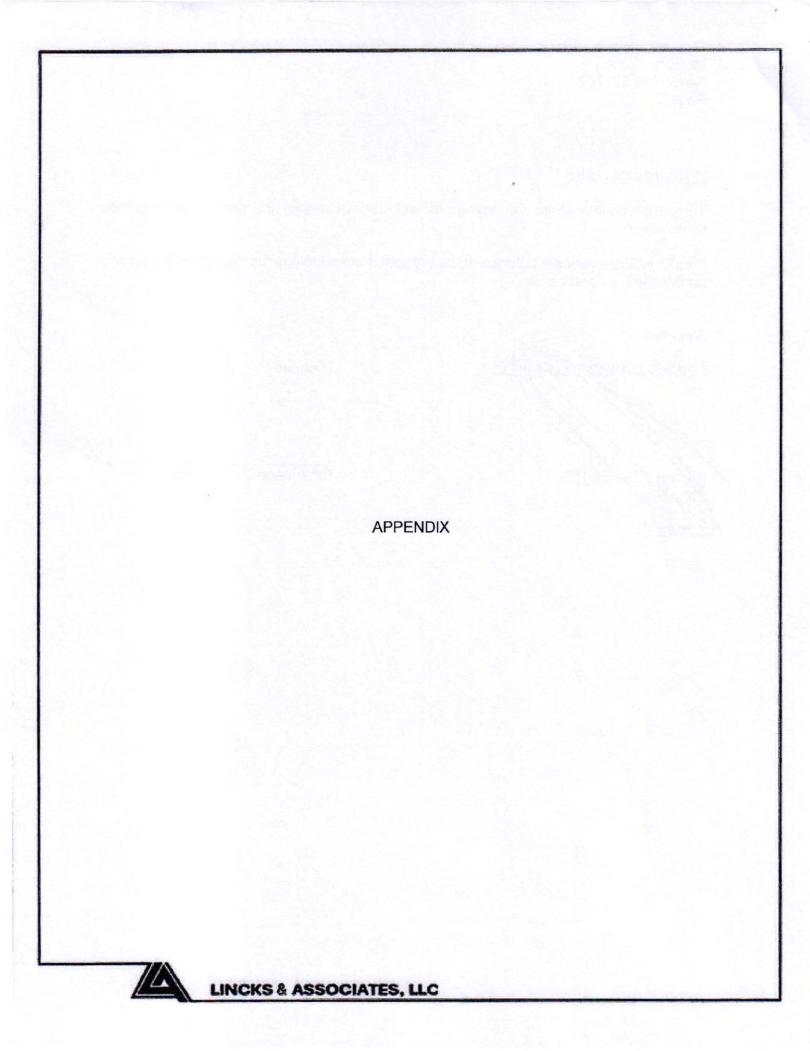

Mr. Ernie Lane November 27, 2024 Page 7

# Proportionate Share

The proportionate share for any improvements required by the project traffic will be determined.

Please indicate your acceptance of the proposed methodology for the project by signing on the line provided below.

Re: Project Name: Shady Oaks Parcel Key: 01150471

Dear Robert Melsom,

The Hernando County Utility Department (HCUD) has infrastructure in the vicinities of the above subject parcel based on ArcGIS mapping. The Developer will be responsible for performing a hydraulic analysis on the existing collection and distribution systems to determine if improvements are required based on the proposed utility demands. Utility service will only be dedicated upon confirmation of system capacity and payment of connection fees.

The following utility infrastructure is located near this property:

Water Service: 6" Water main at the entrance on Treiman Blvd

Wastewater Service: 4" force main at the entrance on Treiman Blvd

If you have any other further questions, please contact me at (352) 754-4037.

Sincerely,

Andrew Laurie
Commercial Services Assistant
Hernando County Utilities Department

RE: Cursory Listed Species Review

**Shady Oaks North** 

Hernando County, Florida

Dear Mr. Tabshe:

Horner Environmental Professionals, Inc. (HEP) visited the referenced property on May 22, 2024 (Figures 1-4). The purpose of the site visit was to provide guidance pertaining to listed wildlife species and their possible existence on site. This correspondence offers a summary of our efforts.

Prior to our field review, the Florida Fish and Wildlife Conservation Commission (FFWCC), U.S. Fish and Wildlife Service (USFWS), and Florida Natural Areas Inventory (FNAI) databases were analyzed to assess what species were likely to occur in the project vicinity. Additionally, site specific data was reviewed with respect to soils and cover types as well as current uses.

The Audubon Eagle Watch database indicates that no bald eagle (*Haliaeetus leucocephalus*) nests exist onsite or within 1 mile of the project site.

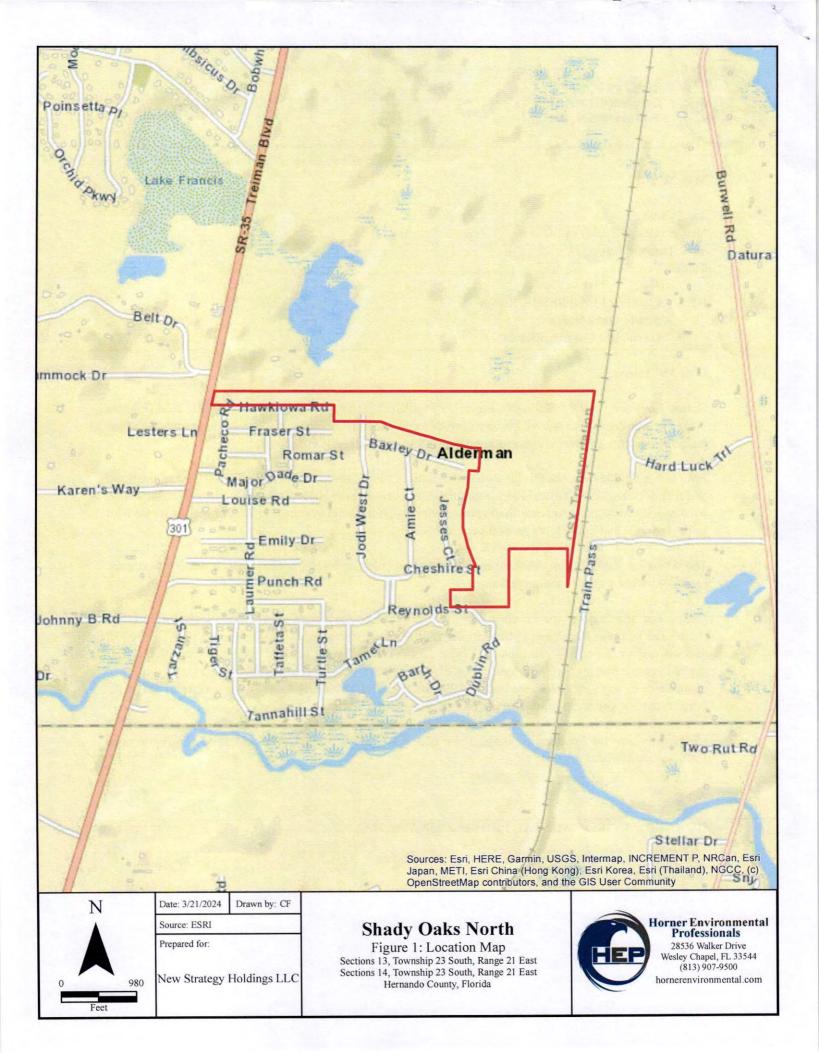

During our site review, special consideration was given to the potential presence of gopher tortoises (*Gopherus polyphemus*). The gopher tortoise is listed as a "threatened" species by the FFWCC and the animals and their burrows are protected from disturbance. During our site review, twenty-five (25) gopher tortoise burrows were observed. An FFWCC permit will need to be obtained prior to the disturbance of any gopher tortoise burrows. No other direct observations of listed species or their occurrence on site were made during our site inspection.

HEP appreciates the opportunity to assist you with this project. Please don't hesitate to call if you need anything additional.

Sincerely,

HORNER ENVIRONMENTAL PROFESSIONALS, INC.

W. Perry Horner President

RE: Environmental Review

Addendum 2 5/28/24 Letter Report

**Shady Oaks North** 

Hernando County, Florida

Dear Mr. Tabshe:

Horner Environmental Professionals, Inc. (HEP) visited the referenced property on May 22, 2024 (Figures 1-4). The purpose of the site visit was to provide guidance pertaining to listed wildlife species and wetlands and their possible existence on site. This correspondence offers a summary of our efforts.

Prior to our field review, the Florida Fish and Wildlife Conservation Commission (FFWCC), U.S. Fish and Wildlife Service (USFWS), and Florida Natural Areas Inventory (FNAI) databases were analyzed to assess what species were likely to occur in the project vicinity. Additionally, site specific data was reviewed with respect to soils and cover types as well as current uses.

The Audubon Eagle Watch database indicates that no bald eagle (*Haliaeetus leucocephalus*) nests exist onsite or within 1 mile of the project site.

During our site review, special consideration was given to the potential presence of gopher tortoises (Gopherus polyphemus). The gopher tortoise is listed as a "threatened" species by the FFWCC and the animals and their burrows are protected from disturbance. During our site review, gopher tortoise burrows were observed. An FFWCC permit will need to be obtained prior to the disturbance of any gopher tortoise burrows. No other direct observations of listed species or their occurrence on site were made during our site inspection.

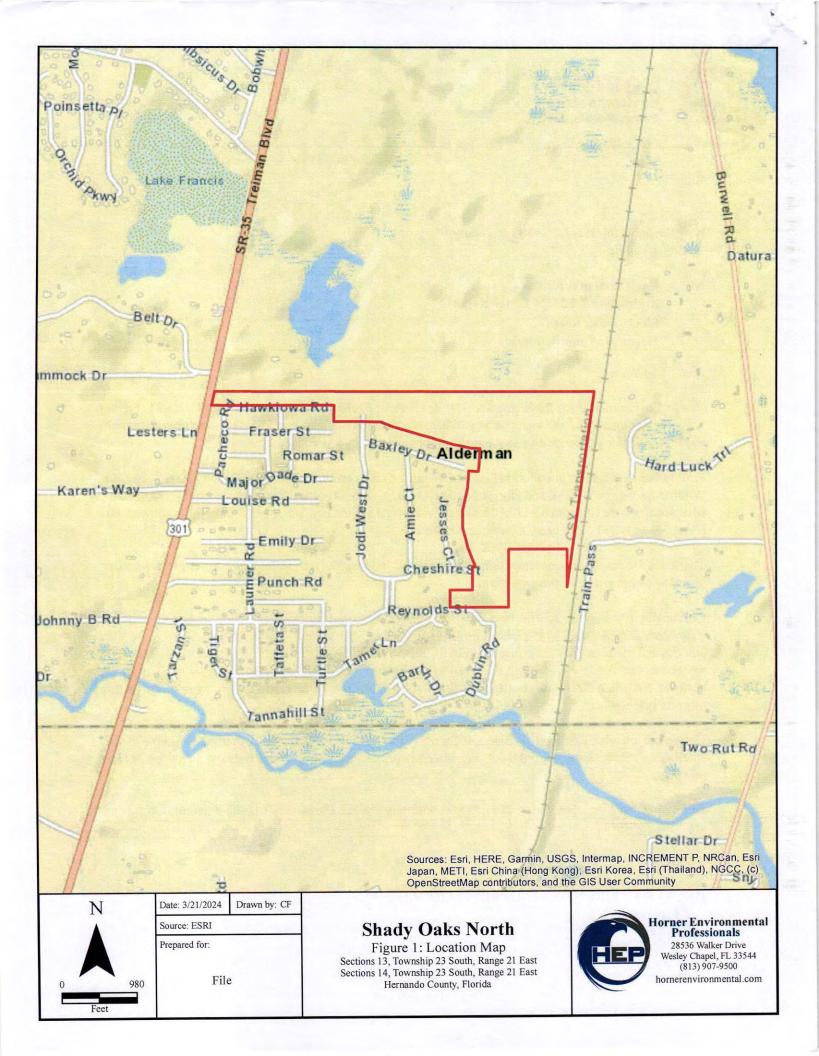

During our site visit HEP reviewed the site for the presence of wetlands onsite. Other than a couple of very small marginal low areas, HEP did not encounter any wetlands or potential wetlands and didn't flag or mark anything.

HEP appreciates the opportunity to assist you with this project. Please don't hesitate to call if you need anything additional.

Sincerely,

HORNER ENVIRONMENTAL PROFESSIONALS, INC.

W. Perry Horner President

#### 1. INTRODUCTION

The applicant, Shady Oak Project, LLC, has purchased the two parcel key properties: 01150471 and 1078862 which combined has a total land area of approximately 83.03-acres that is located on the east side of Hwy. US 301 and is south of State Route 50 in unincorporated Hernando County.

In 1985, the Hernando County Board of County Commissioners (BOCC) approved a rezoning (#H-85-58) that totaled approximately 210 acres and included a mobile home park, commercial uses and 196 dwelling units. The Shady Oak property and subject to this application is where the 196 dwelling units were to be developed.

This rezoning application request is to develop the 196 units as approved in (H-85-58) as a unified detached single family master planned community that provides buffering and open space that compliments the surrounding area and complies with current County and applicable regulations. The proposed minimum lot size for a single family lot is 50 ft. (w) X 120 ft. (D). The homes will have a maximum of 35 ft or two (2) stories. The development will utilize County public potable water and sanitary sewer service.

#### 2. PROJECT PROPOSAL & CHARACTERISTICS

The 83.03 acre project site, subject to this rezoning request, vacant with a variety of upland tree types and sizes. As noted by Horner Environmental in their August 15, 2024 Environmental Review, which is an addendum to their May 28, 2024 review and attached to this application as Exhibits A & B indicated that there were no observed jurisdictional wetlands on the property. There were observed gopher tortoise burrows that will need to obtain the proper permitting prior to any disturbance. No other endangered or listed wildlife species were observed and there were no bald eagle nest(s) on site or within one (1) mile of the site.

Topographically, the site appears to gradually rise from its US Hwy 301 (Treiman Blvd.) frontage by approximately 50 ft. towards the center of the site and then slopes approximately 30 ft. back down to the CSX rail line right-of-way.

The properties frontage along US Hwy. 301 will be the main entrance to the project. This entrance road will be enhanced with landscaping, stormwater, entry monumentations, and walkways as it meanders to the residential and amenity areas of the community. US Hwy. 301 is to be improved by the Florida Department of Transportation (FDOT) to a 4 lane divided roadway. Please refer to Exhibits C. These improvements are scheduled to begin construction in 2025. As illustrated on the zoning site plan, this main entry road is proposed to have an interconnecting local road to Jodi W. Drive, to the south. This intersection will be designed with a round-a-bout. A third potential connection is shown at Reynolds Street. The local roads within the development are proposed to be public and will be designed to comply with Hernando's County development standards.

The project will be designed with a stormwater management system that complies with the current regulations of Hernando County as well as the Southwest Florida Water Management District (SWFWMD). The proposed stormwater ponds are to be located to provide additional separation/buffering from adjacent residential, while enhancing the quality of the single-family lots and overall development. The development will contain a centralized amenity area along with neighborhood parks which will comply with or exceed the County's requirements for acreage. The parks will be located in a manner to promote multi-modal utilization.

It should be noted, that parcel key 1078862 is providing additional buffing and stormwater for the project. The overall density of 196 units, as approved (H-85-58) is not increased.

The total size of the project and proposed density is shown in Table 1 - below.

Table 1
Project Size and Proposed Density

| Site                          | Size in acres                       |
|-------------------------------|-------------------------------------|
| Upland                        | 83.03 ac                            |
| Wetland                       | 0 ac                                |
| Total Site Size               | 83.03 ac                            |
| Proposed Development          | 196 Single Family Detached Units    |
| Gross Density (on Total Site) | 196 units on 83.03 acre = 2.36 u/ac |

#### PROPOSED DEVIATIONS FROM CODE

As illustrated on the submitted PDP Zoning Site Plan, the 196 single family community is designed to provide a transition from the existing residential which are on varying size lots ranging from 50 X 105 to larger and the existing church and Industrial Future Land Use further to the north by substantial separation with large buffer areas , that may incorporate existing vegetation and the stormwater ponds, further described in the application.

The following deviations from Code as based on the utilization of the (R-1A) Residential District standards as outlined in Article IV – Zoning District Regulations; Section 2 – Residential Districts from ARTICLE IV – ZONING DISTRICT REGULATIONS in the adopted Code of Ordinances of Hernando County, Florida, as follows:

- (4) Dimension and area regulations
  - o (b) Minimum lot width
    - Reduction in the required lot width of sixty (60) feet to a minimum of fifty (50) feet.
       The existing residential adjacent to the project site have range from 50 ft. in width to larger. To create the substantial buffering including the location of the proposed stormwater facilities, park requirements and native vegetation standards that have

been adopted since the original 196 units were approved in 1985, that the width the single-family lots be reduced to 50 ft.

### o (c) Minimum front yard requirements

Reduction in the required front yard setback along US 301 from the required 125 ft. to 25 ft. US 301/Treiman Blvd. will be the project's main entry – though there will be no buildings well beyond the 125 ft. requirement, it is envisioned that the US 301 frontage will be improved with a potential entry feature, signage and monumentation and enhanced landscaping.

#### 3. ENVIRONMENTAL CONSIDERATIONS

#### a. Flood Zone

According to the February 2012 FEMA maps the majority of the site not designated with flood plain. Portions of the site have an AE designation. The PDP zoning site plan conceptually incorporates and utilizes a significant portion of the AE Flood Plan areas into the community design. Detailed engineering and permitting will determine the final impacts and if any of the houses or structures will need to be raised above the elevations as established by FEMA. If required, the first floor of all habitable buildings on the site will be elevated, as determined by the engineering and analysis, which will be consistent with Hernando County regulations.

#### b. Water Features

There were no visible water features noted in the review by Horner Environmental, in their Environmental Review, dated August 15, 2024. This review is an addendum to Horner's, May 28, 2024 letter. (Exhibits A & B)

#### c. Habitat

A Preliminary Protected/Listed Species site review was conducted by Horner Environmental. Their observations are provided in Exhibits A & B. In summary gopher tortoise burrows were observed. As noted, no other listed species or their occurrence were observed onsite. According to the Audubon Eagle Watch data base, there are no bald eagle nests either onsite or within one (1) mile of the project site.

#### 4. SITE PLAN

The proposed site plan incorporates the 196 units as approved in the H-85-58 rezoning – while providing a transition from the residential to the south which has lots ranging in size starting at 50 ft. X 105 ft. and Industrial Future Land Use Designation north of the existing church.

The main entrance road from US Hwy. 301 (Treiman Blvd.) meanders through the approx. 154 ft. wide corridor, allowing the opportunity to provide buffering, stormwater and pedestrian connectivity in a design that reflects the rural transition from the residents to the south and the existing church to the

north. A minimum 10 ft. landscape buffer is provided along both the north and south property lines in this corridor. The existing residential to the south also has a 50 ft. wide right-of-way which provides additional buffering. The main entry at US 301 is envisioned to have signage and entry features to identify the project.

The conceptual site plan identifies a potential interconnection with the extension of Jodi West Drive which has a right-of-way that dead ends into the project site. A round-a-bout is proposed at this intersection. This round-a-bout also acts as the main entry feature into the community. The main community road right-of-way will also have a separate 40 ft. wide buffer adjacent to the existing single family to the south. This main community road will incorporate pedestrian level connectivity, which will also extend throughout the community. The main community road will terminate at the proposed community amenity area with another round-a-bout that then provides direction to the single-family lots. It should be noted that the new community plan is illustrating that the existing residential will be buffered by the proposed stormwater management system in addition to a 15 ft. wide landscape buffer.

The new residential area south of the amenity area will contain a neighborhood park, its design and location will be determined upon final design. Overall, the community will achieve and/or exceed the 2.47 acres of community open space per the County Land Development code. This residential area is shown to have a secondary access connection to Reynolds Street. This connection to Reynolds will also be enhanced with landscaping/stormwater areas and buffering. A stormwater pond is shown to provide additional buffering and separation for the amenity area and residential south of the amenity area. Internal to the community will be a pedestrian system connecting the residential areas to the amenity center and neighborhood parks will be provided.

#### Compatibility, project perimeter setbacks and buffers

The PDP site plan as described and as provided, reflects that this property – while having been approved for 196 units, that this property also provides as a transition from the abutting residential to the south with lots ranging from 50 X 105 to greater to the existing church and the vacant land to the north which includes the Future Land Use designation of Industrial.

The site plan provides and reflects this transition with the community's main entry road as it meanders from US 301 to the round-a-bout with a connection to Jodi W. Drive. This meandering alignment creates opportunities to provide for the required stormwater management, buffering/open space and pedestrian connectivity. The buffering along the property line abutting the existing residential expands to 40 ft. in width as the lots for the existing residential to the south also increase in size. This additional buffering provides opportunities to include the preservation of natural vegetation and trees, to meet the County's

requirement to preserve at least 7 % of the natural vegetation. The same is true with the stormwater system that is located between the proposed and existing residential community, which also identifies a 15 ft. wide buffer. Once the tree survey is completed, it is anticipated that the stormwater ponds will be able to be designed to incorporate preservation of existing natural vegetation.

The proposed connection to Reynolds Street will be enhanced a 25 ft. wide buffer along Reynolds Street and abutting residential. This entry area will also provide landscaping, stormwater system and community monumentation. This area will also provide an opportunity to incorporate natural vegetation and pedestrian connectivity.

The residential area south of and including the amenity area will be setback from the existing CSX rail line with a stormwater pond and 20 ft. wide landscape buffer.

Proposed setback and minimum sizes for individual lots -

The proposed minimum lot size for the 196 single-family lots is 50 ft. (W) x 120 ft. (D). Minimum lot area of 6,000 sq. ft. setbacks for individual lots.

- Front 25 ft
- Side 5 ft (a deviation from the 10 ft.)
- Rear 15 ft
- Lot Coverage: Maximum of 40% (a deviation from the 35%)

#### 5. IMPACTS TO PUBLIC FACILITIES

## Transportation

The Traffic Methodology recommendation is submitted and included with this Rezoning Application. The main entry to the community will be from US Hwy. 301 which is programmed to be widened by FDOT, to a 4-lane divided roadway. This development will not reduce the Level of Service of the improved US 301. In addition, the development is proposing interconnectivity to the adjacent existing road network that has right-of-way that abuts the project site including the extension of Jodi W. Drive and connection to Reynolds Street as described. The Traffic Methodology Study was prepared by Lincks & Associates, and attached as Exhibit D.

#### Stormwater Management

The new development will be required to attenuate and treat its stormwater within the project boundaries. The design of this system will comply with Hernando County and SWFWMD regulations. The rezoning master plan – conceptually shows the location the stormwater ponds and how these ponds are used to enhance the buffering and compatibility with the surrounding uses.

#### Utilities

The proposed project will utilize County potable water and sanitary sewer. The applicant will coordinate with the County to determine what improvements, if any, will be required to adequately serve the proposed project

#### Public School Facilities

The applicant understands and will apply for a finding of school capacity for the Hernando County School District and subject to and comply with the educational facilities impact fees. According the school board adopted 2023-2024 budget – Eastside Elementary is funded to construct and add twenty (20) classrooms starting in 2025. Hernando Senior High School is funded to add twelve (12) classrooms beginning in 2027.

#### 6. WATER & SEWER SERVICES

The Hernando County Utility Department (HCUD) identified in a verification letter dated August 25, 2024, and attached as Exhibit E. HCUD confirms that a 6-inch potable water line and a 4-inch sanitary sewer force main are located near the project's main entry on US HWY 301/Treiman Blvd. The applicant will appropriately coordinate with HCUD to ensure the project is adequately served.
