Notes to Reviewers

The following is an abridged narrative report of the efforts to design the proposed project within the Standard of Care and appropriate regulations. Some appendices included have been reduced (size and resolution) or provided under separate cover to simplify this report. Most provided documents (PDFs) are searchable and bookmarked to aid the review. Additionally, we can provide georeferenced information (for example, shapefiles) of some of the intermediate design data (available upon request). Please contact the Engineer-of-Record with any difficulties arising from the review.

The following appendices may be provided by other professionals. Only appendices provided by the Engineer-of-Record are certified.

Revisions from the previous version (see Revisions) are generally shown in **red bold** (when possible) to assist with the review.

1. Introduction

The Master Drainage Plan (MDP) for South Brooksville (Study Area) is approximately 728 acres. The Study Area is located in the Lake Bystre Watershed on the southeast portion of the City of Brooksville but also includes a portion of unincorporated Hernando County. The Study Area is generally bound by Mildred Ave (west), Cortez Blvd (south), Emerson Rd and Jefferson St or US 98 (east), and Mount Fair (north). Drainage from the Study Area ultimately discharges under Cortez Blvd or State Road 50 (SR 50) through two 8' wide box culverts constructed prior to 1996.

This Study updates significant changes to the watershed model for Study Area, evaluates previously constructed Best Management Practices (BMPs), evaluates unimplemented BMPs as identified in the previous MDP (2011), and evaluates potential new BMPs.

The Authorities Having Jurisdiction (AHJs) are:

1. Florida Department of Environmental Protection (FDEP)
2. Southwest Florida Water Management District (SWFWMD)
3. Florida Department of Transportation (FDOT)
4. Hernando County, Florida
5. City of Brooksville, Florida

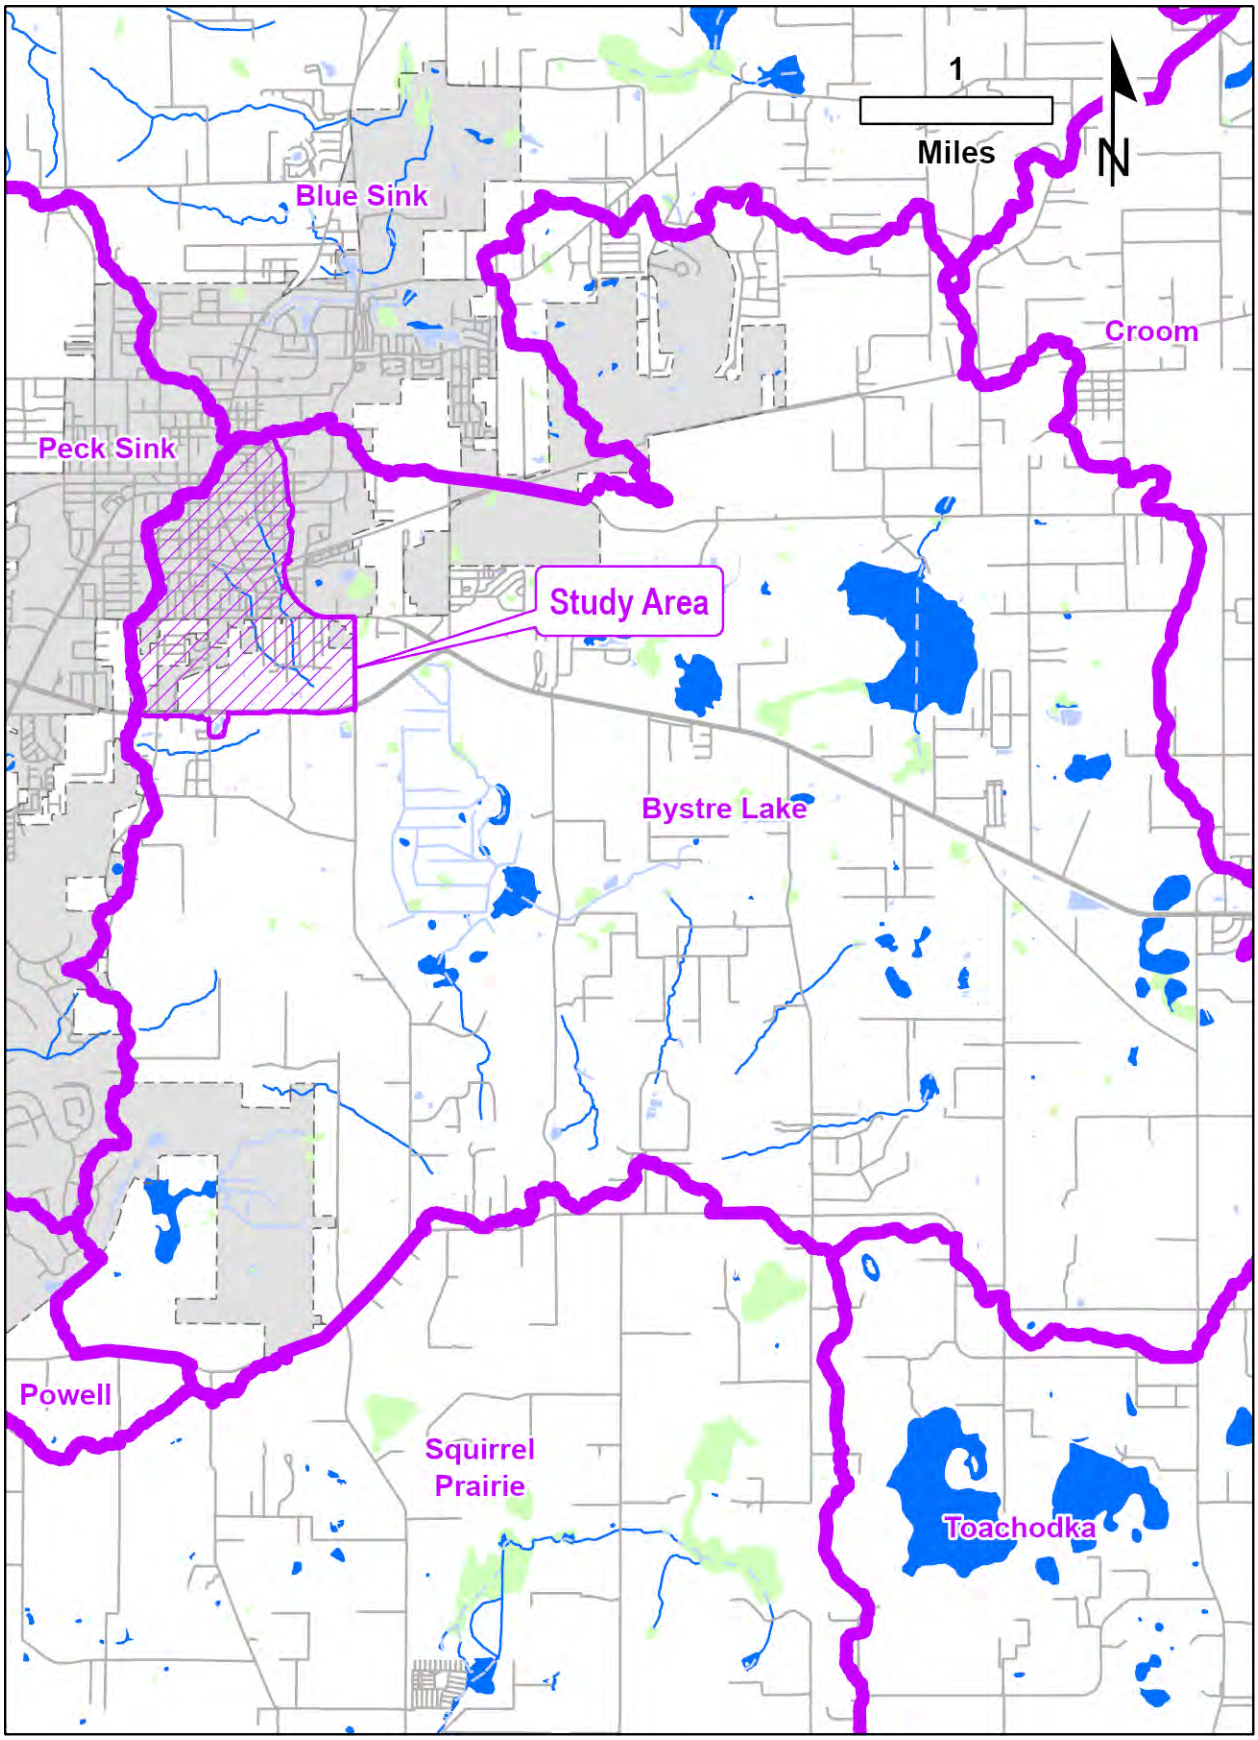

Figure 1. Location Map

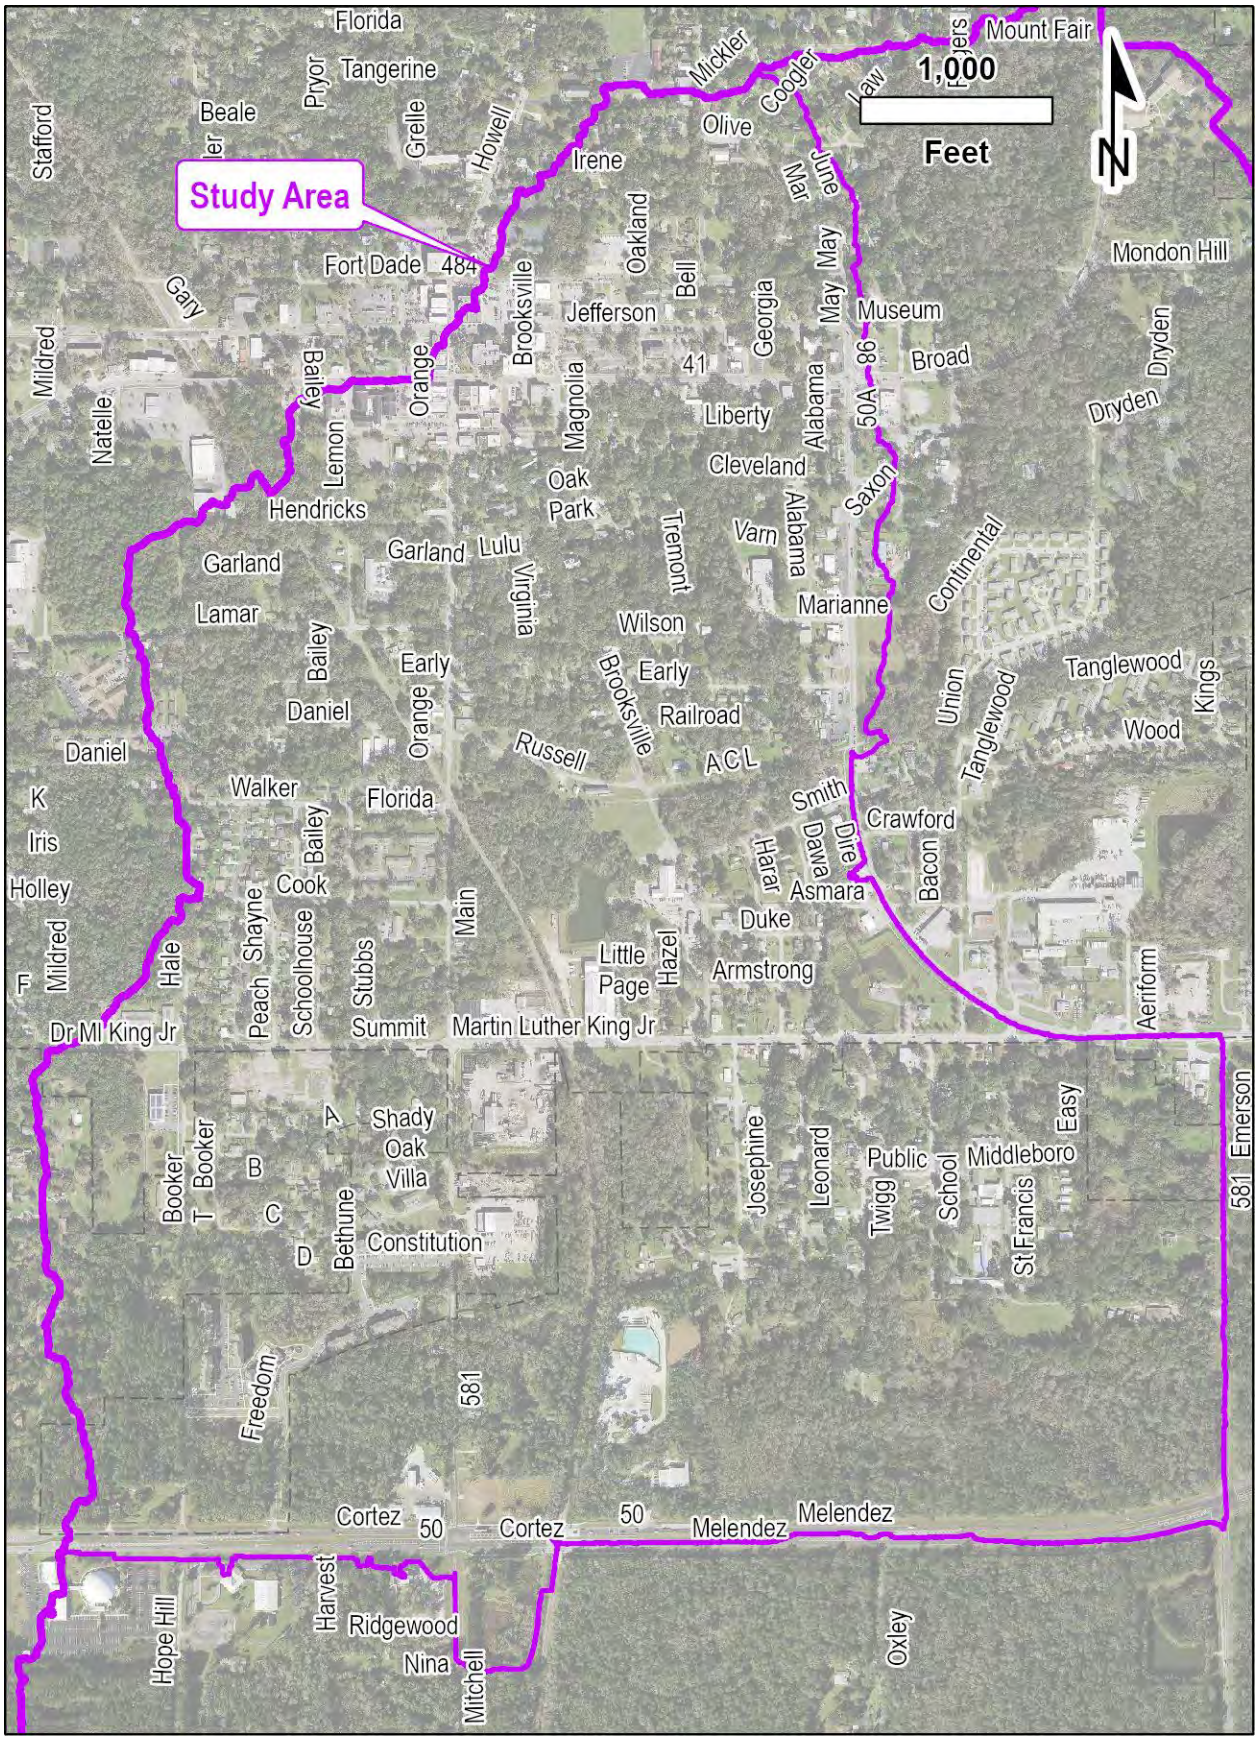

Figure 2. Study Area

1.1. Vertical Datum

All elevations refer to the North American Vertical Datum of 1988 (NAVD) unless otherwise indicated. Conversions from elevation in National Geodetic Vertical Datum of 1929 (NGVD) to NAVD are possible using the following equation:

NAVD + 0.814=NGVD

Or

NGVD - 0.814=NAVD

This conversion is based on NGS Coordinate Conversion and Transformation (NCAT) (https://geodesy.noaa.gov/NCAT/) from the National Geodetic Survey (NGS), National Oceanic and Atmospheric Administration (NOAA). The conversion is based on the following 28.5451717543 latitude and 82.3832130432 longitude.

1.2. Existing Permits

The following permits are near or adjacent to the Study Area and appear to have been constructed after the Bystre Lake Watershed Study was completed (from 1/2006 to 12/2022).

ERP 2980.001 - Hernando County Judicial Renovations
Project located within the Study Area but not added to Watershed Model. Improvements appear to have minimal impacts downstream. Inconsistencies with aerial photographs and as-built features would require fieldwork to accurately incorporate, which is outside the scope of the Study.

ERP 22674.002 - Hernando County DPW Warehouse Expansion
Project located outside of Study Area. Not added to Watershed Model.

ERP 26914.000 - Hernando County Sheriff's Substation
Improvements added to Watershed Model.

ERP 30412.002 - Bar Codes Talk – Warehouse

Project located inside of Study Area but not added to Watershed Model. Considered to have minimal impacts due to downstream changes (ERP 42292.000-001 Freedom Gardens 1 & 2).

ERP 40814.001 - South Brooksville BMP 5 Drainage Improvements
Added to Watershed Model based on publicly available as-built/record drawings.

ERP 41830.001 - South Brooksville BMP 7 Drainage Improvements
Added to Watershed Model based on publicly available as-built/record drawings.

ERP 42077.000 - South Brooksville BMP 6 Drainage Improvements
Added to Watershed Model based on publicly available as-built/record drawings.

ERPs 42292.000-001 - Freedom Gardens 1 and 2
Improvements added to Watershed Model.

ERP 44643.000 - Hernando County Former DPW Drainage Improvements
Project located within Study Area but not added to Watershed Model. Considered to have minimal impacts due to downstream changes (ERP 42292.000-001 Freedom Gardens 1 & 2).

ERP 44666.000 - FDOT Trail
Project located within Study Area but not added to Watershed Model. Considered to have minimal impacts due to downstream changes (ERPs 42077.000 and 41830.001 or BMPs 6 and 7, respectively).

1.3. Flood Zone Maps

The Project Area is shown on the following FEMA Flood Insurance Rate Maps (FIRMs): 12053C0192D (2/2/2012). The Project Area has FEMA flood zones A, AE, and X located within or adjacent.

1.4. Watershed Model

The Project Area is located within the Bystre Lake Watershed. This watershed was modeled by the URS in 2010, using ICPRv3. The Bystre Lake Watershed was Peer-Reviewed by Halcrow in 2009. The Governing Board of the SWFWMD approved the model in 2010. This model was the basis for the current effective FEMA Flood Insurance

Rate Maps (FIRMs). The Watershed Model used for the South Brooksville Stormwater Master Drainage Plan (2011) was based on the Bystre Lake Watershed Model (2010) using ICPRv3. The following table summarizes components and general extent of the various Watershed Models.

Table 1. Model Components Summary

Watershed Model	Area (ac)	Basins	Nodes	Links
Bystre Lake 2010	17604.44	446	522	1065
South Brooksville SWMDP 2011 Pre BMPs	17604.45	446	522	1065
South Brooksville SWMDP 2011 Post BMPs	17604.69	445	522	1057
South Brooksville SWMDP 2023 Sub Model	6933.84	201	248	502

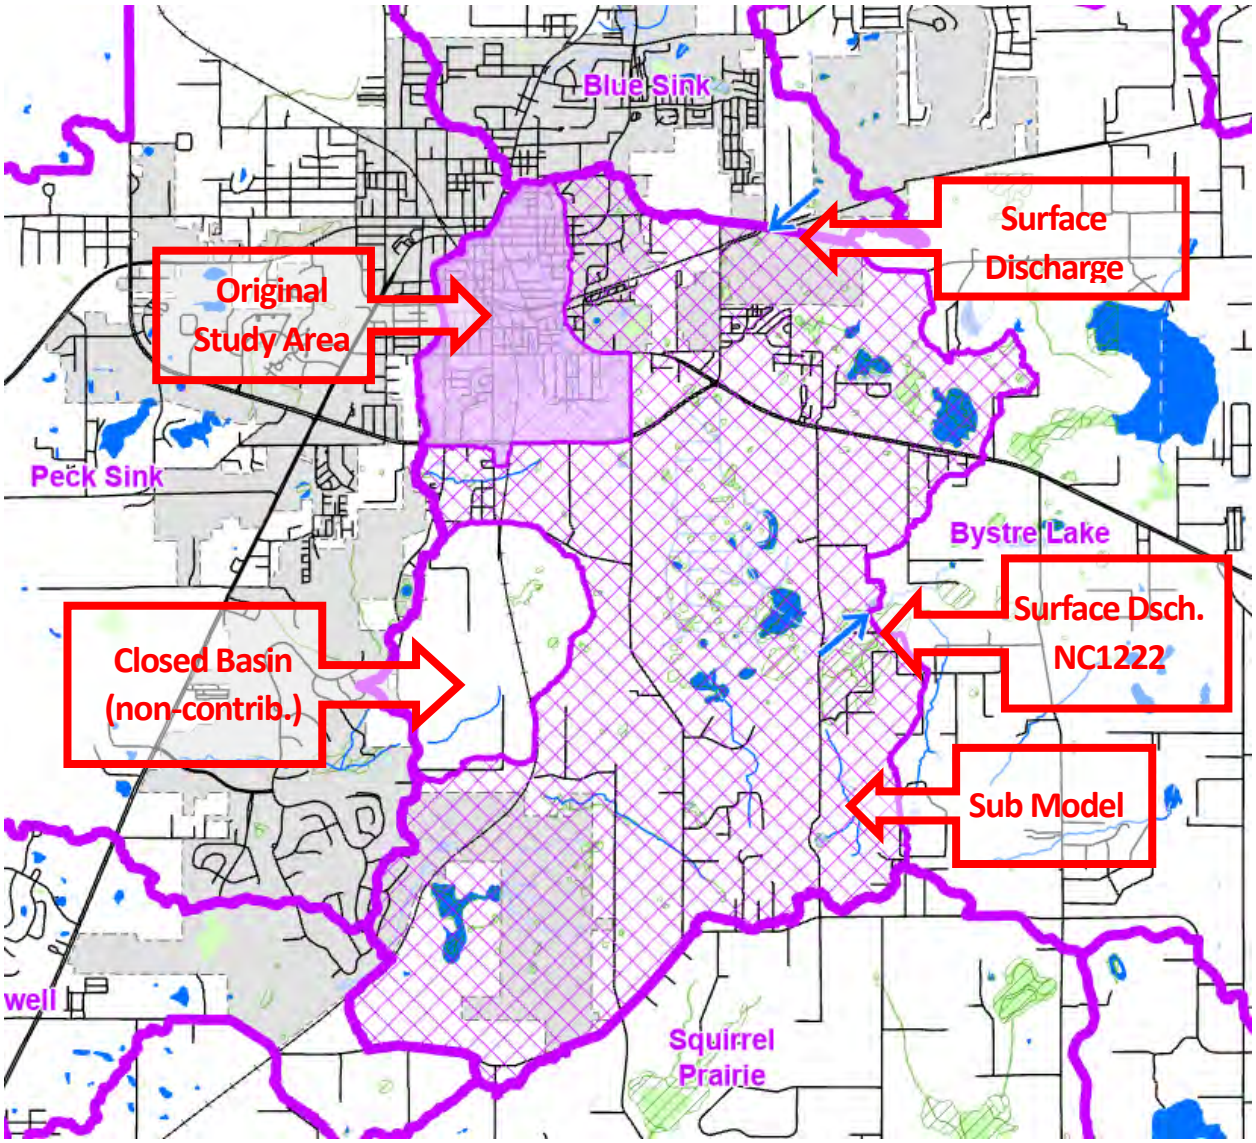

Figure 3. Model Boundary Map

To minimize boundary conditions, we increased the submodel size (see **Figure 3. Model Boundary Map**). This model will only have one time/stage boundary node (NC1222). The distance downstream is sufficient to eliminate inaccuracies in the study area, while eliminating a significant portion (approximately 50%) of the Bystre Lake Watershed Model.

Inflow from Blue Sink appears to be actually an outflow to Blue Sink and is a free-discharge condition (peak stages for all events up to and including 500-Year, are below invert/crest for Links from Bystre Lake).

1.5. Design Storms

The design storms are based on NOAA Atlas 14. These depths were used for existing (before proposed conditions) and proposed (after proposed conditions) hydrologic/hydraulic analysis. For values not directly provided by NOAA Atlas 14, we used log-log interpolation (linear through cubic regression).

Table 2. Design Storms

Storm Recurrence, Duration, & Distribution	Bystre Lake Watershed 2010 (inch)	South Brooksville SWMDP 2011 (inch)	South Brooksville SWMDP 2023 (based on NOAA Atlas 14) (inch)

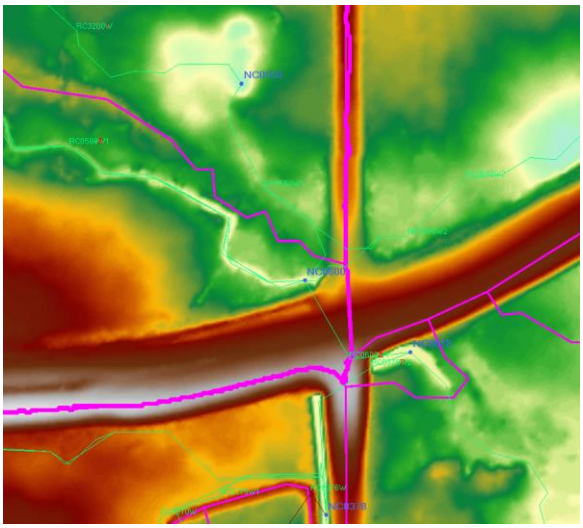
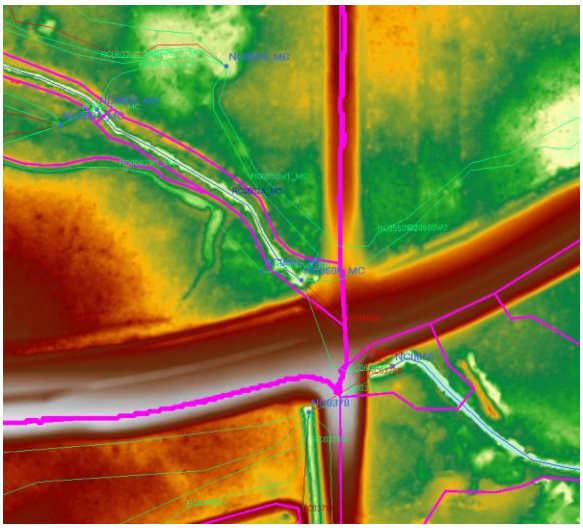
500-Year/168-Hour FDOT 168 Hour	N/A	N/A	25.9
*** 2YR/24HR SBSWMDP 2010**			

2. Existing Conditions

The existing conditions were analyzed using ICPRv4.07.08. The Bystre Lake Watershed Model was revised to reflect the current existing conditions (as of 1/2023) within the Study Area. Revisions to increase the resolution of the discretization were focused on the main conveyance routes upstream of Cortez Blvd (SR 50), but some revisions downstream of Cortez Blvd were made. **Figure 4** is an example of the differences in resolution between the 2011 DEM Surface and the 2023 DEM Surface.



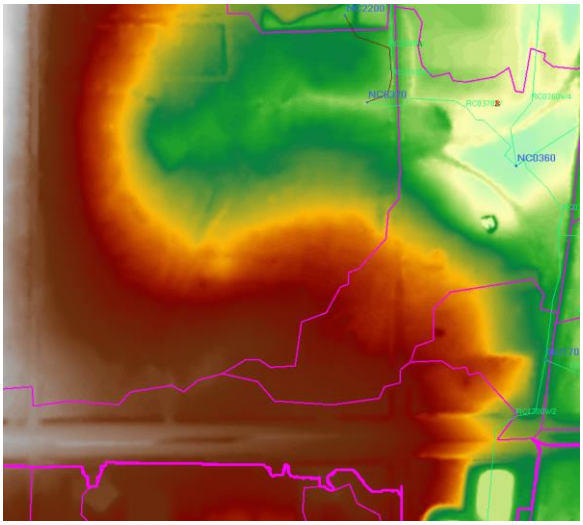
Bystre Lake 2010



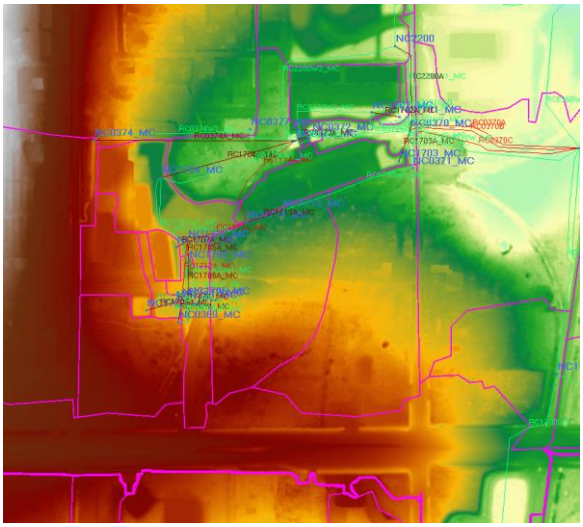
SBSWMDP 2023

Figure 4. Surface Comparison at Cortez Blvd and Emerson Rd

The revisions to channels are based on the Hernando County 2019 DEM available from the SWFWMD. Besides the resolution, it appears that some features have shifted. Many of the revisions were to better model low flow events (like 2.33-Year/24-Hour storm event), which can heavily impact Benefit-Cost Analysis. Placing channels in separate basins also reduces complexity of excluding channel storage from associated nodes.



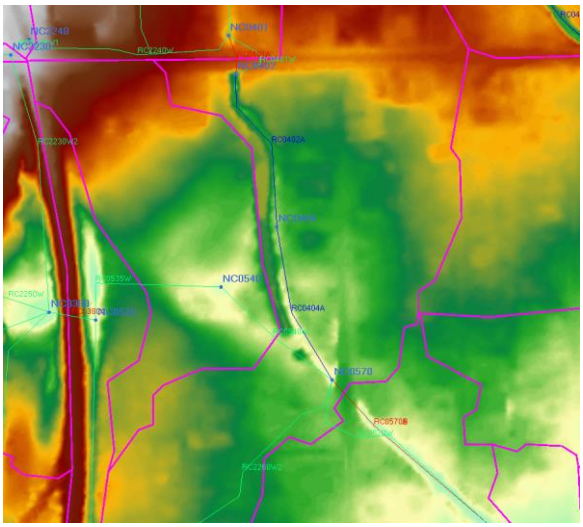
Bystre Lake 2010



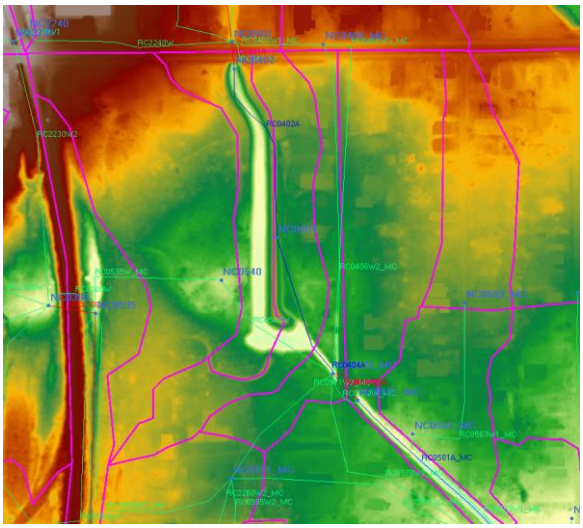
SBSWMDP 2023

Figure 5. Surface Comparison at Cortez Blvd and Mitchell Rd

Additionally, there was some permitted construction within the Study Area that were included and reflected in the 2023 model adjustments. Freedom Gardens 1 and 2 Developments (ERP 42292.000-001) are located within the areas shown in Figure 4B. Those developments directly impacted identified BMP 9 from the South Brooksville SWMDP 2011. Impacts of County stormwater improvement project BMP 6 are shown in **Figure 5**.



Pre-BMP 6



BMP 6

Figure 6. Surface Comparison at BMP 6

2.1. Data Collection

The revisions to the Bystre Lake Watershed model were prepared using the following data:

- 2023 Building Footprints – Hernando County
- 2023 Soils (gSSURGO) – Natural Resource Conservation Services (NRCS)
- 2023 ERP Files of Record – SWFWMD
- 2022 Property Lines – Florida Department of Revenue (FDOR)
- 2020 Aerial Photographs (4-Band) – SWFWMD
- 2019 Hernando DEM (2.5-feet) – SWFWMD
- 2017 Land Use – SWFWMD

The Initial Conditions are based on the associated Watershed Model (see **Section 1.4**).

2.2. Existing Site Conditions

The Existing Conditions Model (as of January 2023) was developed with proposed analysis considered. Additional components, for example basins, links, and nodes, were added in places where previous or future features would be located. The result is significantly more resolution in the study area (see Table below).

Table 3. Model Components for Existing Conditions Model

Watershed Model	Area (ac)	Basins	Nodes	Links
South Brooksville SWMDP 2023 Existing Conditions	6940.84	247	304	590

Basins have been delineated with the associated Watershed Model and adjusted onsite due to better topographic information and to align with proposed features (when possible). The following exhibit is reduced scale and detail, see **Appendix D Drainage Maps**.

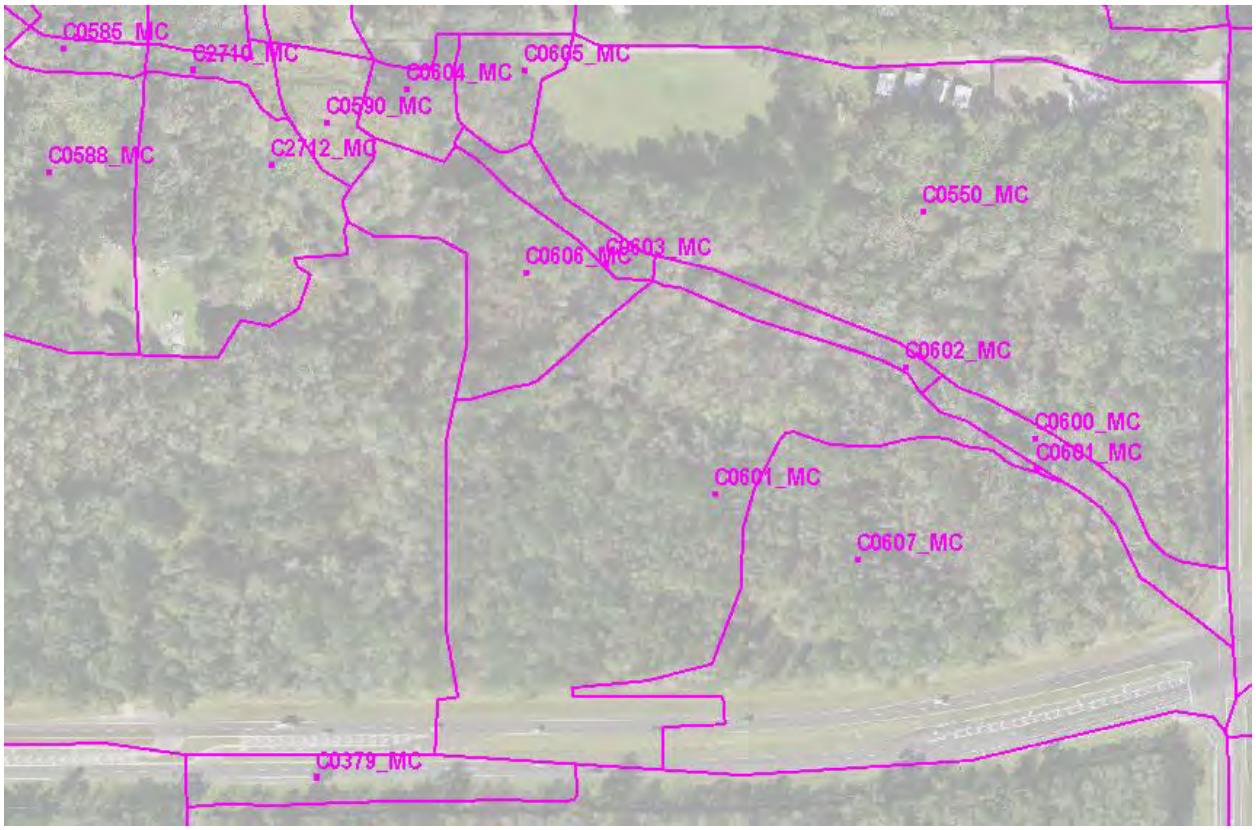


Figure 7. Existing Conditions Drainage Map

2.3. Runoff Estimation

Runoff was estimated using Green-Ampt (AHV2 6.7.d), with normal wet season soil moisture levels (AHV2 6.1), SCS Unit Hydrograph with Shape Factor(s) of 256 and the SCS Type II Florida Modified Rainfall Distribution (SWFWMD AHV2 6.3).

Soil and Land Use values were extracted from the Bystre Lake Watershed Model 2010, by comparing individual basin entries (in converted ICPRv3 model). There was generally good correlation between basins using the same Soils and Land Use values. This approach simplifies the calculations and makes the Manual Basins more understandable. Figure 8 and Figure 9 showing ICPRv4 Basin C0100 input, the updated approach shows Land Cover by FLUCCs and soils by MUKEY, both values directly related to specific land uses and soils.

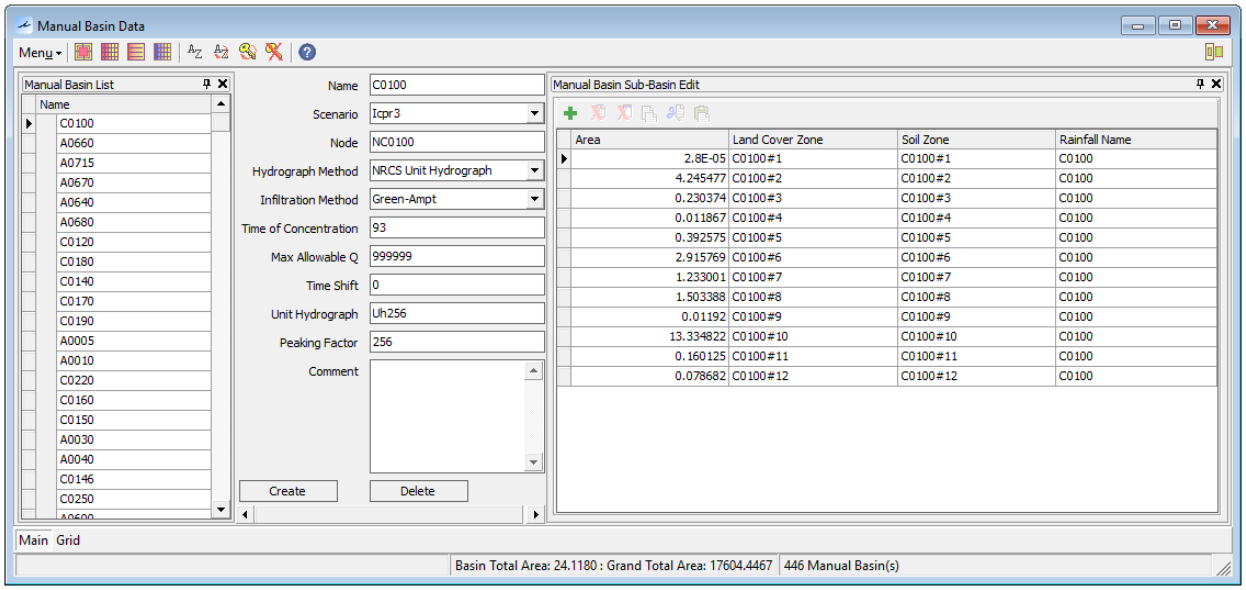

Figure 8. 2011 Submodel Basin C0100 ICPRv4 Input Data

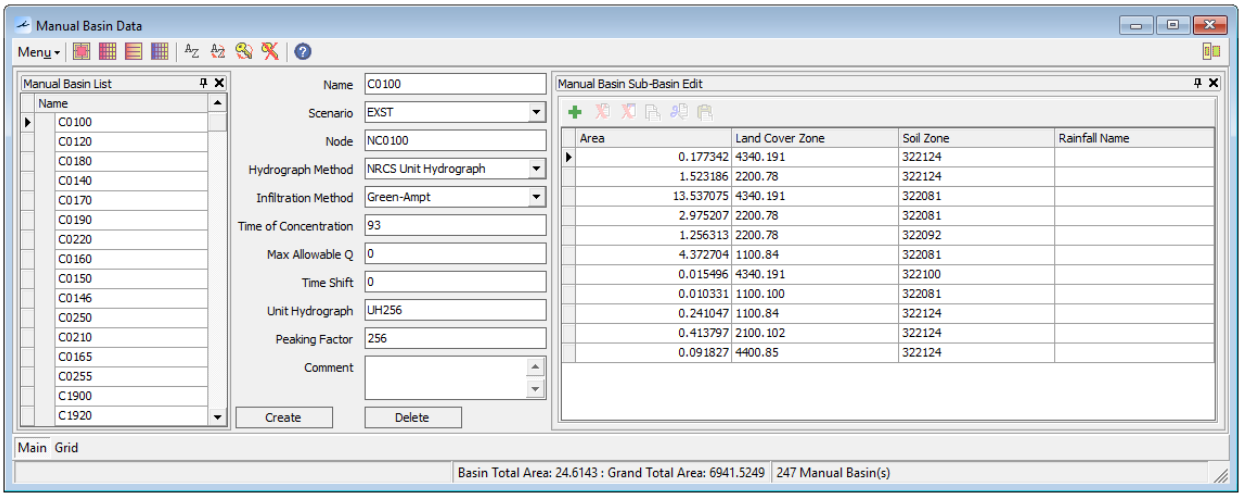

Figure 9. 2023 Existing Conditions Basin C0100 ICPRv4 Input Data

We used Florida Land Use and Cover Codes (FLUCCS) for Land Cover Zone and Soil MUKEY values for Soil Zones. The example above has FLUCCs code for whole number portion with decimal associated with individual estimates of impervious area.

Land Cover Zone	Pct Impervious	Pct DCIA	Pct Direct	Ia Impervious	Ia Pervious
1100	10	0	0	0.1	0.1
1200	15	5	0	0.1	0.1

322090	0.253576	6.8358	0	0.072381	0	0
… (rows removed for brevity)						

Additionally, we estimated the current impervious percentages per Land Use zone. This estimate was based on road widths, building footprints, and Normalized Difference Vegetation Index (NDVI) derived from the SWFWMD's 4-band 2020 aerial photographs. The runoff estimates were improved by these individual estimates for impervious areas per Land Cover Zone, by more accurately accounting for spatial variability of impervious areas. Directly Connected Impervious Area percentages were held from original data, when appropriate.

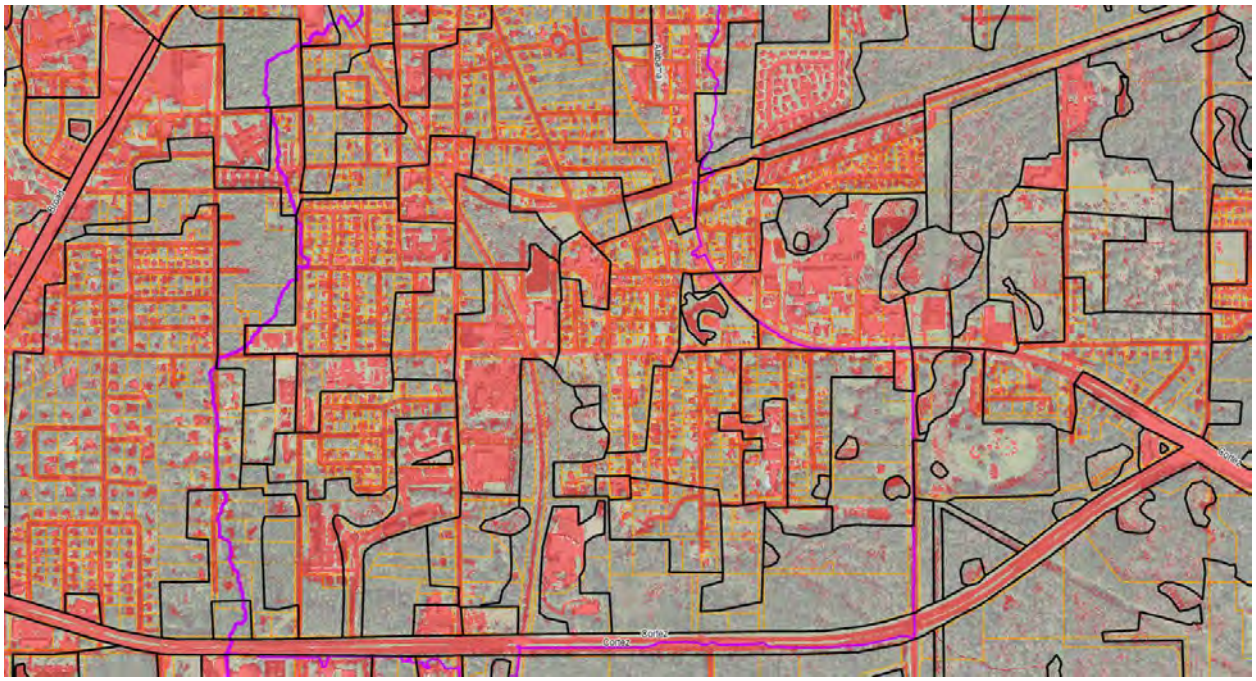

Figure 10. NDVI for Study Area

Table 4. Impervious Estimates per Land Cover Area

Land Cover Zone	Impervious %	DCIA %	Direct %	Impervious Ia (in)	Pervious Ia (in)
...					
1300.513	33.14	20	0	0.1	0.1
1300.533	49.88	20	0	0.1	0.1
1300.585	58	20	0	0.1	0.1
1300.634	61.85	20	0	0.1	0.1
1300.656	39.45	20	0	0.1	0.1
1300.701	52.1	20	0	0.1	0.1
1300.707	53.08	20	0	0.1	0.1
1300.715	51.78	20	0	0.1	0.1
1300.732	40.69	20	0	0.1	0.1
1300.735	63.44	20	0	0.1	0.1
1300.762	58.35	20	0	0.1	0.1

Land Cover Zone	Impervious %	DCIA %	Direct %	Impervious Ia (in)	Pervious Ia (in)
1300.768	46.99	20	0	0.1	0.1
1300.778	66.15	20	0	0.1	0.1
1300.784	66.17	20	0	0.1	0.1
1300.848	51.99	20	0	0.1	0.1
1300.865	57.38	20	0	0.1	0.1
…					

This approach does allow for spatial variability of impervious areas therefore improving runoff estimates.

2.4. Time of Concentration

Times of Concentration were approximated using the Velocity Method (TR55 Method) for revised basins. These calculations are available in Existing Conditions Hydrologic/Hydraulic Model Data (see **Appendix D2 Existing Time of Concentration Calculations**).

3. Hydrologic and Hydraulic Evaluation

3.1. Previous Studies

The Study Area is located within the Bystre Lake Watershed which was last published by the Southwest Florida Water Management District (SWFWMD) in 2010. This model was used as the basis for the South Brooksville Stormwater Master Drainage Plan in 2011 (SBSWMDP 2011).

3.2. Watershed Model Development

The revised watershed model representing the existing conditions was used to develop all BMP models. Simple exhibits showing project areas are included in **Appendix D3**.

3.3. Model Parameters

The model parameters for the proposed models (various BMP Alternatives) match the existing conditions model.

3.4. Modifications to the Bystre Lake Model

The revisions to the Bystre Lake Model to better match existing conditions and align with proposed BMPs, was described in **Section 2 Existing Conditions**.

3.5. Alternatives Analysis

The previous study, South Brooksville Stormwater Master Drainage Plan (2011), identified ten (10) drainage improvement projects. Three projects were implemented (5, 6, and 7). Project 9 is no longer possible, a residential development was permitted and constructed over the same area. Project 1 required (or connected to) Project 9, so it was not considered for further analysis.

4. Water Quality Evaluation

The proposed BMPs have been configured to favor drainage concerns. Even though there will be some stormwater quality improvements, the improvements are primarily associated with conversion of sources of pollutants to detention/retention areas and reduction of erosion.

Further evaluation and documentation of stormwater quality improvements is advisable during individual BMP design and permitting. Credits for net improvements should be reserved for future projects, other BMPs documented in this Plan or unrelated projects.

5. Best Management Practices

The Best Management Practices (BMPs) reviewed fit into two major categories: attenuation and conveyance improvements. Attenuation improvements (detention or retention) can also provide water quality improvements through assimilation (wet detention) or infiltration (dry retention). Attenuation improvements require land with hydraulic connection to the flooding source. Conveyance improvements (storm sewers and channels) can move flooding but generally do not significantly attenuate (reduce peak flooding depths).

The BMPs from the South Brooksville Stormwater Master Drainage Plan 2011 (SBSWMDP 2011) were reviewed within the context of the existing conditions (considering constructed BMPs, significant development in the Study Area, and refined topographic information). Several (minimum of three) configurations for each BMP were reviewed to determine a likely optimal configuration. BMPs 5, 6, and 7 have been constructed and were considered in the existing conditions for further development of BMPs. BMP 2 is the only remaining BMP (from original BMPs) with significant attenuation capacity, so it was a requirement for all remaining viable BMPs (BMP 3, 4, 8, and 10). BMP 11 (downstream of Cortez Blvd / SR 50) is outside the original study area but provides some attenuation.

Potential Additional Improvements

Identifying additional potential improvements can be challenging. We reviewed the existing water surface profile along major flow paths. Plan and Profiles are provided in **Figure 11**, **Figure 12**, **Figure 13**, and **Figure 14.** Flows appear to be impacted by Cortez Blvd (SR 50). Modeling indicates minimal benefits (reductions in peak flood stages) of additional parallel pipes under SR 50, and the construction costs are very significant (due to the existing traffic and complexity of construction). Channel improvements upstream and downstream of Cortez Blvd / SR 50 appear to provide greater reductions in flood stages than increasing conveyance under Cortez Blvd / SR 50.

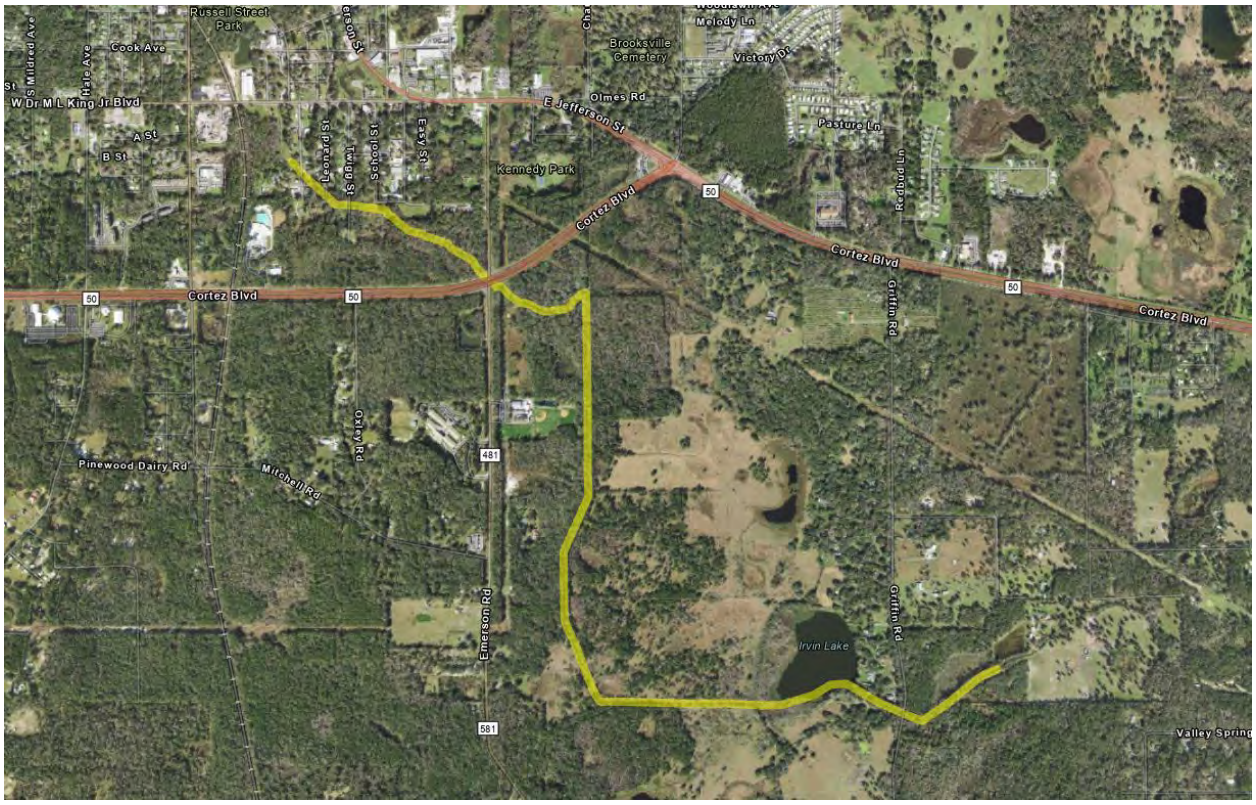

Figure 11. Existing Water Surface Plan 1

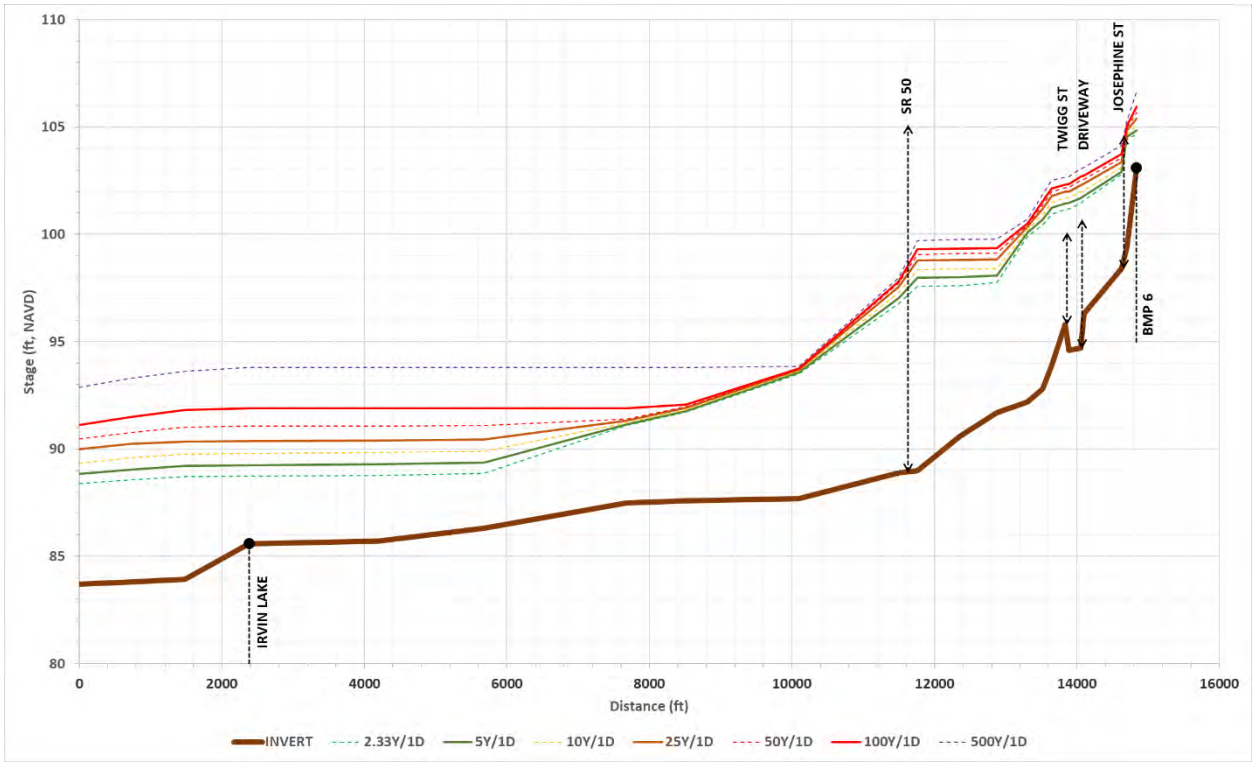

Figure 12. Existing Water Surface Profile 1

Figure 13. Existing Water Surface Plan 2

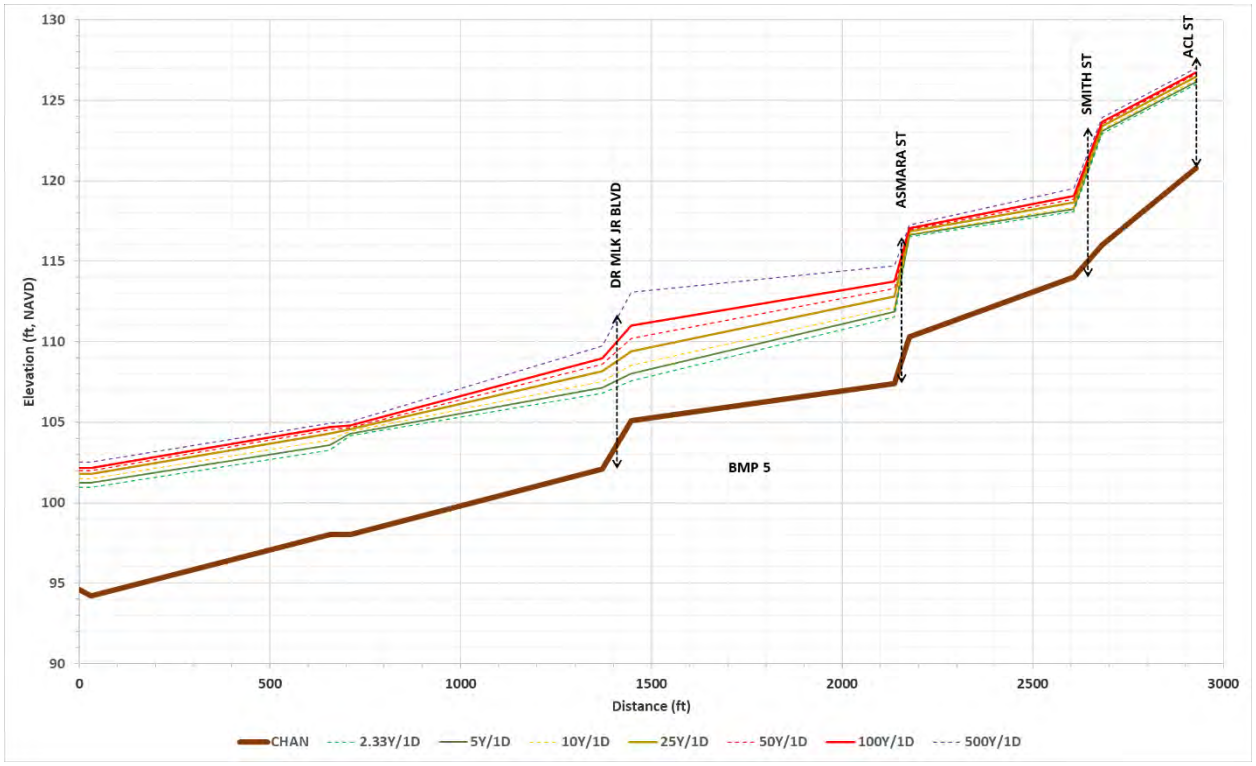

Figure 14. Existing Water Surface Profile 2

Channel Improvements: Gabion Baskets with Open Bottom

Gabion Baskets are generally easier to construct and less expensive than concrete lined channels. Baseflow can occur through the gabion baskets which reduces groundwater seepage issues. The baskets can be configured vertical to near vertical (0.5:1 horizontal to vertical ratio) configurations. Like with the concrete channels, open bottoms reduce environmental impact and permit complexities.

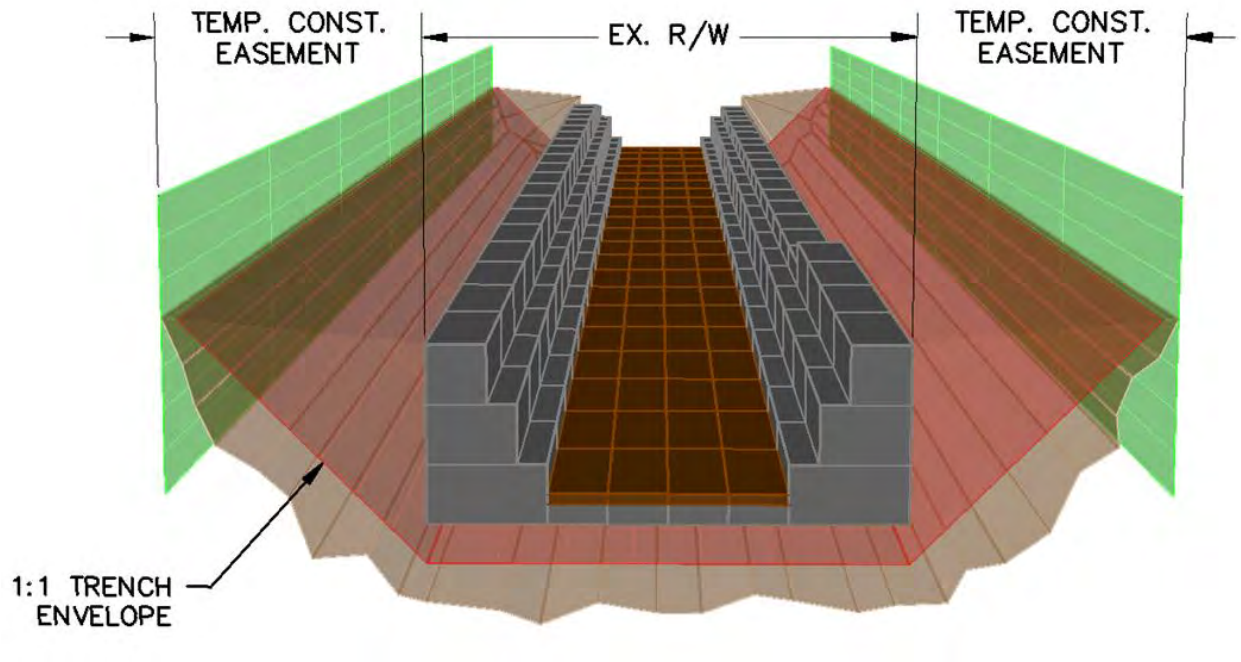

Figure 15. Gabion Basket Channel

Channel Improvements: Concrete Lined Channels with Open Bottoms

Concrete lined channels can be easier to maintain than Gabion Baskets. Construction is more complex and expensive than Gabion Baskets. Like with the Gabion Baskets, open bottoms reduce environmental impact and permit complexities. Intermediate cross bracing of the concrete slopes is advisable, to improve slope stability.

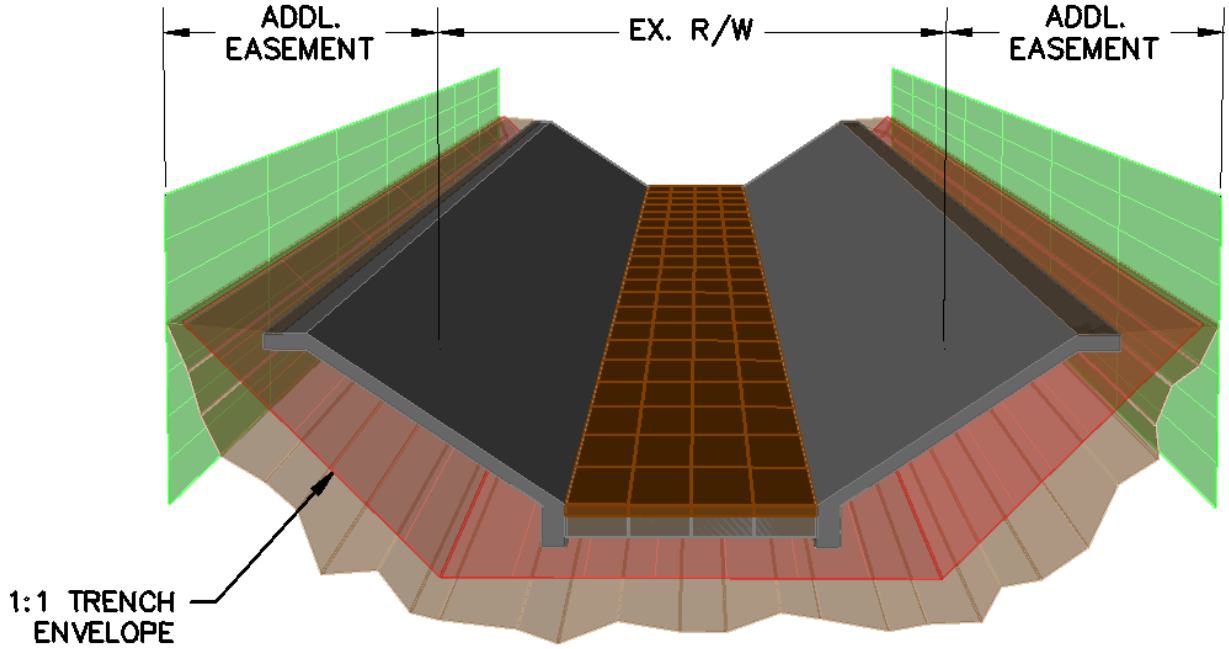

Figure 16. Concrete Lined Channel

5.1. BMP 1

The previous proposed BMP 1, from SBSWMDP 2011, description is included below:

> *Description: BMP 1 is stormwater improvements at the site of the old Hernando County Department of Public Works (DPW) compound. During the BMP development phase, coordination meetings were held with the DPW Environmental Engineering consultant to discuss options for stormwater management. The Environmental consultant provided valuable information and input for determination for best location, depth and configuration of a stormwater management system. The proposed improvements include a detention pond located at the southeast corner of the parcel. The proposed pond is located at the area of the lowest elevation of the site directly north of the existing swale carrying runoff from the site. The "L" shaped pond is proposed to have 5 foot wide bottom and 3 foot depth, with 4 to 1 side slopes. An overflow weir structure will control flow from the proposed pond to the existing swale and allows for one foot freeboard. Stormwater enters the pond via overland flow.*
>
> *Benefits: Construction of the stormwater detention pond in this BMP will alleviate local flooding offsite of the project site. The proposed BMP will also assist with reducing downstream sediment loading.*

This BMP appears to have been permitted and may have been constructed. The stormwater management system located at BMP 1 was intended to attenuate and treat stormwater from proposed improvements. Given the downstream BMP (BMP 9) is no longer viable due to a residential development, we have concluded no further review of this BMP is appropriate. The impacts of this BMP (constructed or not) will not be significant in the primary study area because of the downstream changes.

5.2. BMP 2

The previous proposed BMP 2, from SBSWMDP 2011, description is included below:

> *Description: BMP 2 is stormwater improvements at the abandoned Brooksville Wastewater Treatment Plant site located south of Newgate Street, near its intersection with School Street. The proposed improvements include two large detention ponds located at the west side of the site. The proposed pond is located at the intersections of several existing channels. The "L" shaped pond is proposed to be 4 foot deep with 4 to 1 side slopes. Water would flow into the pond via culverts from two channels and the 24" x 38" elliptical storm sewer on St Francis Street which is currently in design phase. An existing channel with stormwater flowing west to east separates the two proposed ponds. Piping crossing this channel functions as equalization piping. An overflow weir structure will control flow from the proposed pond to the existing channel, and allows for T freeboard. The ponds also allow for future widening and improvement of Newgate Street. This BMP also includes improvements to the culverts crossing Twigg Street and Newgate Street.*
>
> *Benefits: Construction of the stormwater detention pond in this BMP will alleviate local flooding north of the project site. The cost includes improvements to existing culverts crossing Twigg and Newgate, demolition of the few remaining features of the old Wastewater Treatment Plant, and construction of the two ponds.*

BMP 2 is also referred to as BMP 2AB due to the bifurcation of the detention system. The location appears to be more effective, if slightly limited. The most effective configuration will allow inflows (unrestricted) at the highest elevation and outflows (restricted) at the lowest elevation. This configuration for the attenuation storage maximizes the stage reduction. The aerial extent was expanded to limits of existing public ownership and to avoid takings and secondary impacts to drainage (obstructing existing drainage).

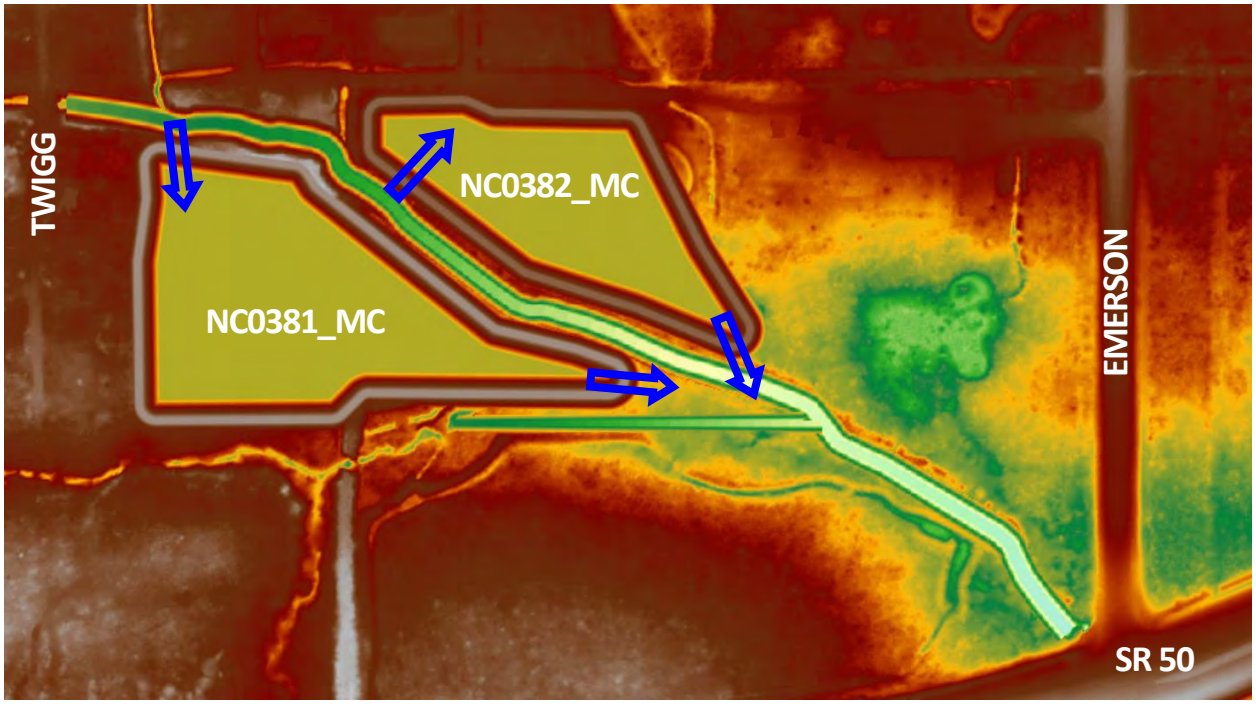

Figure 17. Proposed BMP 2 DEM

Additional refinements to the grading are possible. Expanding NC0381_MC west is limited by a residential property. Expanding NC0382_MC to the east is limited by drainage and storage impacts. The overall storage is relatively small based on the volume of discharge along the channel (306 ac*ft). Conveyance and bypass improvements are necessary to realize the full benefits of BMP 2.

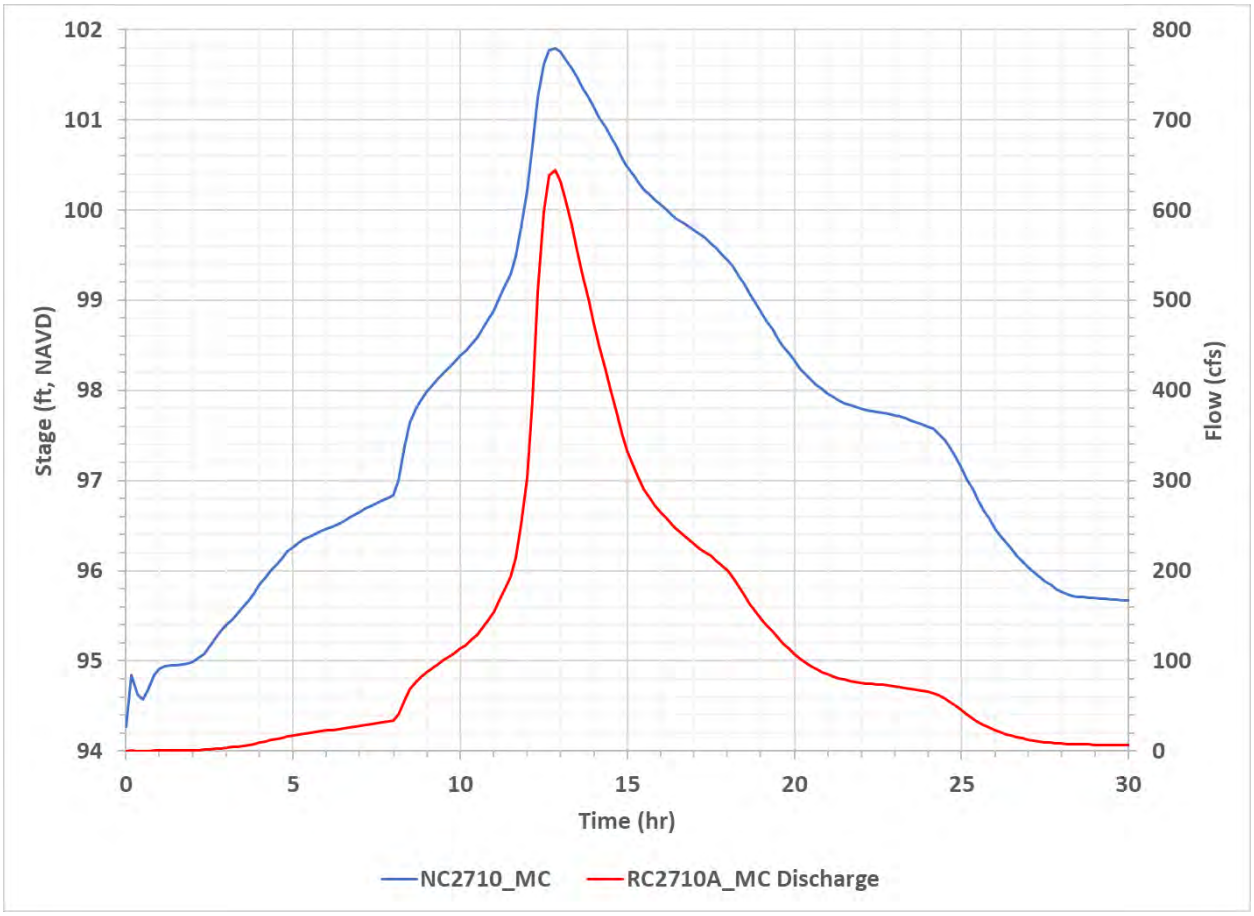

Figure 18. 25Y/1D Stage and Flow for NC2710_MC and RC2710A_MC

BMP 2 (aka BMP 2AB) Major Components

- Two Stormwater Detention Areas (ICPR Model Components NC0381_MC and NC0382_MC)
- Channel Improvements from Twigg Street to SR 50 (ICPR Model Components RC0602A_MC, RC0603A_MC, RC0604A_MC, RC0591A_MC, RC2710A_MC, and RC2713A_MC)
- Bypass Channel (ICPR Model Components RC0601W2_MC and NC0601_MC)
- Property or Easement Purchase (lower portion of Channel Improvements to SR 50)

BMP 2 Dependency(ies)

- BMP 11 (possibly none)

5.3. BMP 3

The previous proposed BMP 3, from SBSWMDP 2011, description is included below:

Description: BMP 3 is stormwater improvements between Twigg and School Street from Martin Luther King Boulevard to Newgate Street. This is the southern portion of a storm water channel known locally as Saxon's Brook. The proposed improvement in this BMP includes an 8' x 6' box culvert from Martin Luther King to Newgate within an existing channel at approximately 3' below existing ground elevation. Stormwater will enter the box culvert north of Martin Luther King and will exit the box culvert south of Newgate Street into the regional stormwater pond described in BMP 2. A manhole is included south of Martin Luther King where the channel changes direction from southwest to directly south. A 20' wide by T deep trapezoidal channel with 4 to 1 side slopes will also be constructed within the easement area, and immediately above the proposed box culvert. The purpose of this open channel is to collect and convey surface runoff from the adjoining properties, as well as provide for additional conveyance capacity and relief of surcharge conditions that will develop during the rare but extremely high flows. Clearance/acquisition of the easement must be accomplished before this BMP can be fully implemented.

Benefits: Construction of the stormwater box culvert improves stormwater flow from Martin Luther King Boulevard to the proposed regional stormwater pond described in BMP 2. By using a culvert rather than the channel for conveyance, local flooding is reduced between Twigg and Newgate Streets and decreases sediment loading downstream within the pond. By improving the stormwater conveyance in this area, flooding upstream of Martin Luther King Blvd. is also reduced. The cost does not include improvements to culverts crossing Newgate as this cost is included in BMP 2, nor does it include the cost of easement acquisition.

BMP 3 could be open (channel) or closed (pipe) but the County expressed concern for an open configuration, therefore the only alternative that was reviewed was to match the existing upstream culverts from previously constructed BMP 5 (2 – 6' x 5' RCBs). The use of RCBs will improve construction and reduce needed drainage easements.

BMP 3 Major Components

- Two 6' x 5' RCBs from Martin Luther King Jr Blvd to BMP 2 (ICPR Model Components RC0485A_MC, RC0560A, and RC0565A_MC)
- Property or Easement Purchase

BMP 3 Dependency(ies)

- BMP 11
- BMP 2 (aka BMP 2AB)

5.4. BMP 4

The previous proposed BMP 4, from SBSWMDP 2011, description is included below:

> *Description: BMP 4 is stormwater improvements of the existing channel located between Dire-Dawa Avenue and Jefferson Street from Smith Street to Asmara Street. The proposed improvements in this BMP involve widening the existing channel to the maximum width allowed based on the existing easement. Some purchase of property for additional easement will be required to allow for a consistent channel width along the full length of the channel. The culvert sizes under A.C.L, Smith, and Asmara Streets will be increased to prevent upstream flooding impacts and not impede flow through the channel. Improvement of the channel includes enhancing the vegetation along the channel slopes to improve stabilization.*
>
> *Benefits: Improving the stormwater channel reduces flooding locally between Smith and Asmara Street and reduces sediment loading downstream. By improving the stormwater conveyance in this area, flooding upstream of Smith Street will also be reduced. Public safety will be enhanced by reduction of the 100 year flood event in the area and downstream of the pond. The cost does not include acquisition of additional property for the drainage easement.*

The revised BMP 4 simplifies the previous approach to limit channel improvements to immediately upstream of Smith Street and immediately downstream of Asmara Street. Channel improvements between Smith and Amara Streets were evaluated using a gabion basket design with an open bottom.

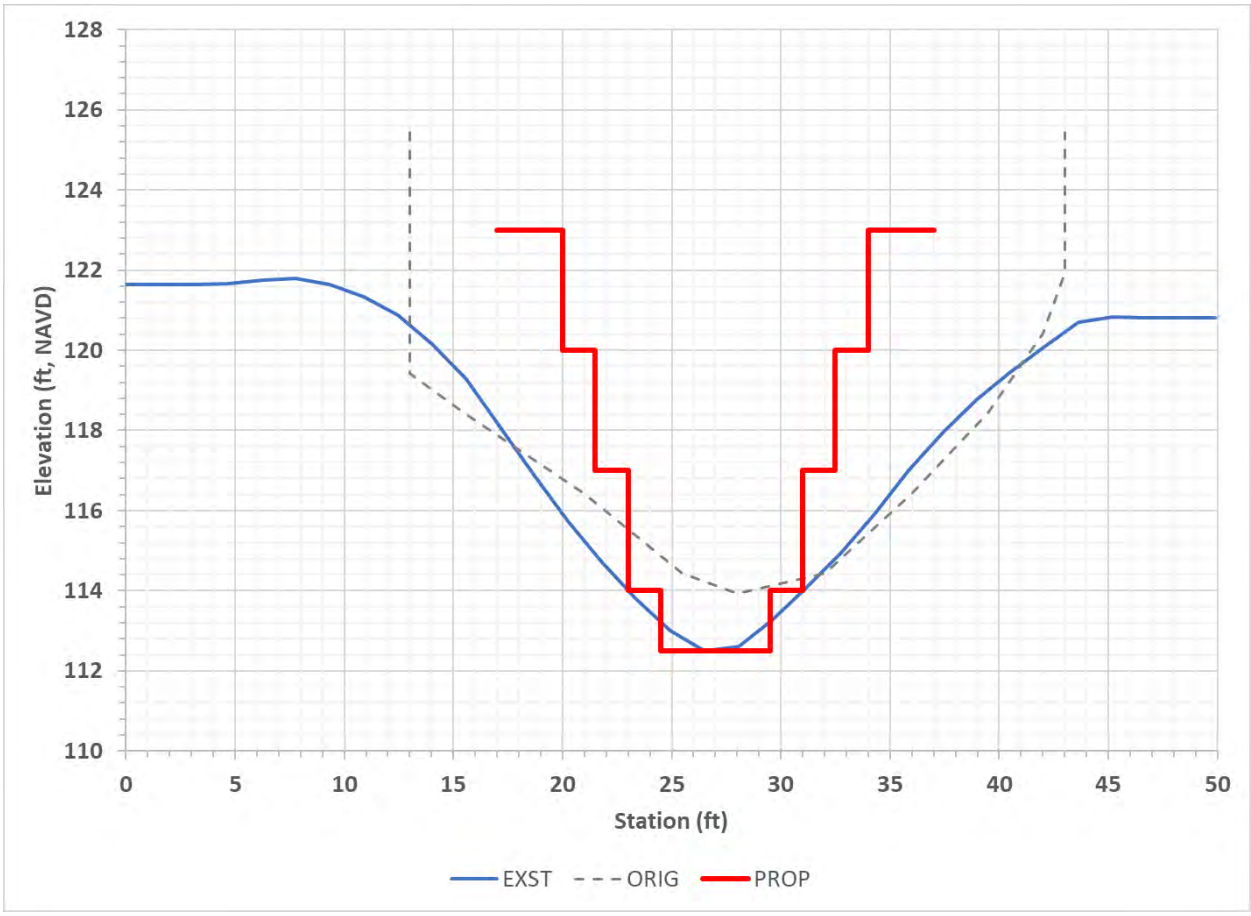

Figure 19. BMP 4 Channel Between Asmara and Smith

The depth varies (based on LiDAR DEM) from north to south, but the available right-of-way is limited to approximately 30-feet. The section shown above is 20-feet (out-to-out) but would not be constructable without significant temporary construction easements (TCEs). Wider sections would improve drainage (by adding storage) but would cost more (slightly for construction and significantly for land acquisition).

Culverts are proposed to be removed and replaced with larger (more conveyance) RCBs at Smith (6' x 4' RCB) and Asmara (6' x 6' RCB) Streets. These RCBs match the existing culverts height, which should improve constructability. The existing channel between Smith and Amara Streets is proposed to be replaced with a Gabion basket channel to the limits of the existing right-of-way. Additional easements may be necessary for construction and maintenance.

BMP 4 Major Components

- 6' x 4' RCB under Smith Street (ICPR Model Component RC0450A_MC)

- 6' x 6' RCB under Asmara Street (ICPR Model Component RC0460A_MC)
- Gabion Basket Channel from Smith to Asmara Streets (ICPR Model Component RC0455A_MC)
- Property or Easement Purchase

BMP 4 Dependency(ies)

- BMP 11
- BMP 2 (aka BMP 2AB)
- BMP 3

5.5. BMP 5

The previous proposed BMP 5, from SBSWMDP 2011, description is included below:

Description: BMP 5 is stormwater improvements at the cell tower located on "Parcel 23" at the corner of Asmara Street, Jefferson Street, and Martin Luther King Boulevard. This parcel is also known locally as "The Dauson Property," and was recently acquired by Hernando County specifically for storm water management purposes. The proposed improvements include a single detention pond located at the west side of the site. An existing sanitary sewer pipe on the parcel will be relocated to the east of the pond to maximize detention capacity. The proposed pond is bordered by the existing channel (Saxon's Brook) to the west. The proposed pond is approximately 4' deep with 4 to 1 side slopes. Stormwater will flow into the pond at the northwest corner of the parcel via an existing 72["] diameter culvert. No improvements are proposed in this BMP to the culvert under Asmara Street. Flow discharges from the pond to the south side of the parcel through two existing 5' by 6' box culverts under Martin Luther King Boulevard. Included in this BMP is the proposed improvement of the channel section with stabilization measures. This will be accomplished by enhancing the vegetation along the channel slopes to improve stabilization. No improvements are proposed to the existing box culvert under Martin Luther King, Jr. Boulevard. The proposed preliminary design requires purchase of several residential properties to the west side of the parcel which include the existing channel to become part of the proposed pond.

Benefits: The stormwater detention pond in this BMP will act as intermediate volume detention control for higher rain fall events. This will allow stormwater

volume to be released at reduced rates thereby preventing peak flooding events from occurring downstream through the conveyance system proposed as part of BMP 3, described previously. Sedimentation will also be reduced by enhancement of the vegetated channel stabilization methods, thereby improving water quality downstream. Public safety will be enhanced by the stormwater pond by reduction of the 100 year flood event in the area to the west of the pond and downstream of the pond. The cost does not include acquisition of property to the west occupied by the existing channel that will be incorporated by the proposed pond.

BMP 5 was constructed. The available as-built information was used to update the Lake Bystre Watershed Model.

5.6. BMP 6

The previous proposed BMP 6, from SBSWMDP 2011, description is included below:

Description Option A: BMP 6 Option A includes stormwater improvements to the existing channel (also known locally as Parson's Creek) from Martin Luther King Boulevard to the parcel owned by Hernando County located on the west side of Josephine Street, construction of a detention pond on the County owned property, and channel improvements with construction of a double 8' x 6' box culvert from the proposed detention pond to Newgate Street. Two feet above this double box culvert will be constructed a shallow (1" deep) trapezoidal open channel to collect and convey surface water runoff from adjoining properties; this open channel will also act as a conveyance and relief feature under surcharge conditions during those rare times of extreme flows. This Box Culvert/Open Channel stormwater conveyance feature discharges into the detention pond proposed in BMP 2. Channel improvements upstream from the County owned parcel on Josephine will include widening the channel in certain areas to provide a consistent cross section that maximizes flow and allows for 4 to 1 side slopes. Drainage easement will need to be obtained for several parcels for construction of these improvements.

Description Option B: BMP 6 Option B includes all of Option A, identified above plus constructing an enlarged long linear detention pond along the west side of the existing channel (Parson's Creek) to provide additional storage of excess runoff. Construction the detention pond will require a drainage easement from the adjacent property owners.

Construction Benefits: of the stormwater double box culvert as proposed will improve stormwater flow along Parson's Creek from Martin Luther King Boulevard through the existing channel to the proposed regional stormwater pond described in BMP 2. By improving the channel, adding detention, and including the double box culvert local flooding is reduced and water quality will be improved. The cost does not include purchase of any easements. The culvert crossing improvement for Newgate is included in BMP 2.

BMP 6 was partially constructed. The available as-built information was used to update the Lake Bystre Watershed Model. Construction of double 8' x 6' RCBs were not completed as originally planned.

5.7. BMP 7

The previous proposed BMP 7, from SBSWMDP 2011, description is included below:

Description Option A: There are two options proposed for BMP 7. Option A involves constructing a stormwater detention pond on the City of Brooksville DPW site such that the CDPW would need to be relocated and the buildings demolished prior to construction. The portion of the pond extending into Russell Park would only be used for 100 year flood plain expansion and so would remain dry other than during a 100 year flood event. Stormwater will enter the pond through the channel from the northwest of the parcel. This BMP will utilize a cascade method from upper pool to lower pool to take advantage of the existing terrain and park improvements. This BMP also includes channel improvements to the south and west of the site and includes widening channel in areas to provide a consistent cross section that maximizes flow and allows for 4 to 1 slopes. Flow exits to the southeast corner of the site through a control structure into a single 8' x 6' box culvert.

Description Option B: Option B is similar to Option A, but no pond would be located at the CDPW site and so the City of Brooksville DPW facilities would not need to be relocated. This BMP will also utilize a cascade method from upper pool to lower pool to take advantage of the existing terrain and park improvements. The portion of the pond extending into Russell Park would be expanded somewhat, but as in Option B, would only be used for 100 year flood plain expansion. Control structures,

piping, and channel improvements would be essentially the same as described in Option B.

BMP 7 was constructed. The available as-built information was used to update the Lake Bystre Watershed Model.

5.8. BMP 8

The previous proposed BMP 8, from SBSWMDP 2011, description is included below:

Description: BMP 8 includes a 60" diameter pipe to divert flow from the existing channel west of Jefferson Street (upper reaches of Saxon's Brook) to the existing channel at Russell Park (Parson's Creek). Improvements include three stormwater manholes and diversion structure within the existing channel west of Jefferson, and crossing under South Brooksville. Drainage easements will need to be obtained from several parcels for construction of these improvements.

Benefits: Construction of the stormwater culvert improves flooding conditions downstream of Smith Street between Dire-Dawa Street and Jefferson Street. Additionally, water quality will be improved through reduction of sediment loading.

BMP 8 diverts flows from contributing to BMP 4 and subsequently to BMP 5. It was found that too much diversion would cause flooding in BMP 7. Therefore, the size was limited to 24" RCP.

BMP 8 Major Components

- 24" RCP (ICPR Model Component RC2510A_MC)

BMP 8 Dependency(ies)

- BMP 11
- BMP 2 (aka BMP 2AB)
- BMP 3
- BMP 4
- BMP 12

5.9. BMP 9

The previous proposed BMP 9, from SBSWMDP 2011, description is included below:

Description: BMP 9 includes 36" diameter culvert along Bethune Street from A Street to D Street. The pipe begins at a proposed overflow structure located in the existing swale on the old DPW site, which is described in BMP No. 1. To construct this proposed improvement, a drainage easement along the street and acquisition of one parcel will be required. The pipe along Bethune will be constructed within the right-of-way.

Benefits: Construction of the stormwater culvert improves flooding conditions between A Street and Shady Oak Village Circle.

BMP 9 does not appear to be viable after residential development was constructed.

5.10. BMP 10

The previous proposed BMP 10, from SBSWMDP 2011, description is included below:

Description: BMP 10 includes a 24" x 38" elliptical pipe along Martin Luther King Boulevard from the existing channel east of Twigg Street to St. Francis Street culvert which is currently in design phase. Improvements include one stormwater manhole and diversion structure within the existing channel. The pipe along Martin Luther King Boulevard will be constructed within the right-of-way.

Benefits: Benefits include diverting flow from the channel addressed in BMP 3, and will help reduce flooding between Twigg and School Streets during higher rain fall events. Sedimentation will be reduced downstream with the reduction of flow within the open channel thereby improving water quality downstream.

BMP 10 will improve conveyance down St. Francis Street from BMP 5 and under School Street to reduce flooding at the southern end of School Street.

BMP 10 Major Components

- 36" RCP down St. Francis Street to BMP 2B (ICPR Model Component RC0482B_MC)
- 36" RCP from downstream end of BMP 5 to St. Francis Street (ICPR Model Component RC0482A_MC)

- 24" RCP under School Street (ICPR Model Component RC0599B_MC)
- 30" RCP under School Street (ICPR Model Component RC0599A_MC)

BMP 10 Dependency(ies)

- BMP 11
- BMP 2 (aka BMP 2AB)

5.11. BMP 11

This BMP provides some necessary improvements outside (downstream or southeast) of the study area. Channel improvements from SR 50 to property owned by the County, excavation of detention area, and construction of diversion weir are proposed.

BMP 11 Major Components

- Channel improvements downstream of SR 50 (ICPR Model Component RC0618A_MC)
- Detention Area (ICPR Model Component NC0621_MC)
- Diversion Weir (ICPR Model Component RC0619W3_MC)
- Property or Easement Purchase

BMP 11 Dependency(ies)

- None

5.12. BMP 12

This BMP provides the function for the portion BMP 6 not constructed. Channel improvements and 8' x 4' reinforced concrete box (RCB) culverts are proposed.

BMP 12 Major Components

- Channel improvements from Twigg Street to BMP 6 (ICPR Model Components RC0587A_MC, RC0581A_MC, and RC0405A_MC)
- Two 8' x 4' RCB Culverts at Twigg (ICPR Model Component RC0585A_MC)
- Two 8' x 4' RCB Culverts at Private Driveway (ICPR Model Component RC0580A_MC)
- Culvert removal at Leonard Street (if necessary)

- Two 8’ x 4’ RCB Culverts at St. Josephine Street (ICPR Model Component RC0570A_MC)
- Property or Easement Purchase

BMP 12 Dependency(ies)

- BMP 11
- BMP 2 (aka BMP 2AB)

6. Summary

The following summarizes the performance of each BMP, opinions of probable construction costs, and permitting requirements.

6.1. Benefits

Benefits as avoided damages were estimated using the approach detailed in LOS/SWRS/BMP and using the Benefit Cost Analysis Tool (Excel Spreadsheet) from the Southwest Florida Water Management District (2016). The Benefits of previously implemented BMPs (5, 6, and 7) were analyzed based on the existing conditions minus the BMPs versus the existing conditions (to best estimate the impact of BMPs 5, 6, and 7).

Table 5. Inundated Structures

BMP(s)	2.33-Year	5-Year	10-Year	25-Year	50-Year	100-Year
Pre-5, 6, & 7	4	4	6	7	9	14
5, 6, & 7	2	4	4	5	7	10

6.2. Opinion of Probable Costs

The following Engineer's Opinions of Probable Construction Cost (EOPCC) is not a guarantee and is provided only for general budgetary guidance. This EOPCC is based on conceptual layout prepared without survey information and the typical range for this EOPCC is approximately -30% to +50% (meaning costs below could be 30% lower or 50% higher than eventual construction costs). The following EOPCC is only for civil components and excludes mitigation, landscaping, and additional design services.

Table 6. Individual BMP EOPCC

BMP	Avg. Grand Total (weighted average)	Likely Range (standard deviation estimate)
1	Permitted	N/A
2 (2AB)	$2,605,704	± $363,356
3	$4,633,404	± $449,348
4	$739,329	± $115,159
5	Previously Constructed	N/A
6	Previously Constructed	N/A
7	Previously Constructed	N/A
8	$890,572	± $85,724
9	No longer viable	N/A
10	$2,035,040	± $171,819
11	$1,348,856	± $223,039
12	$1,536,699	± $162,117

Some potential BMPs are dependent on other BMPs to provide attenuation or conveyance improvements. Opinions of Probable Construction Costs for the analyzed combinations of BMPs are below.

Table 7. Proposed BMP Combinations

BMP	Avg. Grand Total	Likely Range
11	$1,348,856	± $223,039
11 & 2AB	$3,954,560	± $586,395
11, 2AB, & 3	$8,587,964	± $1,035,743
11, 2AB, 3, & 4	$9,327,293	± $1,150,902
11, 2AB, 3, 4, & 8	$10,217,865	± $1,236,626
11, 2AB, 3, 4, 8, & 10	$12,252,905	± $1,408,445
11, 2AB, 3, 4, & 12	$10,863,992	± $1,313,019
11, 2AB, 3, 4, 8, 10, & 12	$13,789,604	± $1,570,562

6.3. Regulatory Considerations

The preceding BMPs were developed without surveys (boundary, topographic, or wetland) and without geotechnical investigation information. Wetland and Geotechnical constraints may impact configuration and performance of any BMP. The following requirements are based on the regulations in effect when this document was prepared.

BMP 2 (aka BMP 2AB)

This project was discussed with the Southwest Florida Water Management District (SWFWMD) and the Florida Department of Environmental Protection (FDEP) during Pre-Application Meetings. Some aspects of BMP 2AB were not discussed, that is the channel improvements, and further coordination would be advisable.

BMP 2 (aka BMP 2AB) Permits

- SWFWMD Environmental Resource Permit (highly likely)
- FDOT Drainage Connection Permit (highly likely)
- FDEP 404 Permit (less likely)

- Wildlife Permits (likely)

BMP 3

The selected configuration for this BMP (closed RCB and filling existing channel) may increase the complexity of and requirements for mitigation. Including mitigation through BMP 2AB for impacts from BMP 3 may be advisable.

BMP 3 Permits

- SWFWMD Environmental Resource Permit (highly likely)
- FDEP 404 Permit (less likely)
- Wildlife Permits (likely)

BMP 4

The proposed configuration may qualify for an exemption, though the increases in culverts upstream and downstream may require an Environmental Resource Permit (ERP) from the Southwest Florida Water Management District (SWFWMD).

BMP 4 Permits

- SWFWMD Environmental Resource Permit (likely)
- FDEP 404 Permit (less likely)
- Wildlife Permits (likely)

BMP 8

The proposed configuration is primarily a storm sewer providing drainage relief from BMP 4 to BMP 7. This project likely can be permitted with minimal effort.

BMP 8 Permits

- SWFWMD Environmental Resource Permit (less likely)
- FDEP 404 Permit (less likely)
- Wildlife Permits (less likely)

BMP 10

The proposed configuration is primarily a storm sewer providing drainage relief from BMP 5 to BMP 2AB. This project likely can be permitted with minimal effort.

BMP 10 Permits

- SWFWMD Environmental Resource Permit (less likely)
- FDEP 404 Permit (very unlikely)
- Wildlife Permits (less likely)

BMP 11

This project is adjacent to and downstream of the FDOT right-of-way and stormwater resources. Even though this project increases the stages in the FDOT right-of-way, it is well below the adjacent roads and does not impact the FDOT's drainage system. Given the intension of the project is to promote flow increases under SR 50, coordination FDOT throughout the design development is advisable.

BMP 11 Permits

- SWFWMD Environmental Resource Permit (highly likely)
- FDOT Drainage Connection Permit (likely)
- FDEP 404 Permit (less likely)
- Wildlife Permits (likely)

BMP 12

Even though this project was not discussed recently with the Authorities Having Jurisdiction (AHJs), it is like the previous BMP 6 and other bank stabilization projects. It should not be challenging to design and permit if the requisite projects have been constructed. Impacts due to filling portions of the existing channel should be mitigated in preceding projects.

BMP 12 Permits

- SWFWMD Environmental Resource Permit (likely)
- FDEP 404 Permit (less likely)
- Wildlife Permits (likely)

H. Engineer's Opinion of Probable Construction Cost

Prepared by the Report's Engineer-of-Record.

The following Engineer's Opinions of Probable Construction Cost (EOPCC) is not a guarantee and is provided only for general budgetary guidance. This EOPCC is based on conceptual layout prepared without survey information and the range for this EOPCC is approximately -30% to +50%.

H1. BMP 2 (aka BMP 2AB)

Prepared by the Report's Engineer-of-Record.

The following Engineer's Opinions of Probable Construction Cost (EOPCC) is not a guarantee and is provided only for general budgetary guidance. This EOPCC is based on conceptual layout prepared without survey information and the range for this EOPCC is approximately -30% to +50%.

[1] Precipitation frequency (PF) estimates in this table are based on frequency analysis of partial duration series (PDS).

Numbers in parenthesis are PF estimates at lower and upper bounds of the 90% confidence interval. The probability that precipitation frequency estimates (for a given duration and average recurrence interval) will be greater than the upper bound (or less than the lower bound) is 5%. Estimates at upper bounds are not checked against probable maximum precipitation (PMP) estimates and may be higher than currently valid PMP values.

I3. Pre-Application Meetings

THIS FORM IS INTENDED TO FACILITATE AND GUIDE THE DIALOGUE DURING A PRE-APPLICATION MEETING BY PROVIDING A PARTIAL "PROMPT LIST" OF DISCUSSION SUBJECTS. IT IS NOT A LIST OF REQUIREMENTS FOR SUBMITTAL BY THE APPLICANT.

SOUTHWEST FLORIDA WATER MANAGEMENT DISTRICT
RESOURCE REGULATION DIVISION
PRE-APPLICATION MEETING NOTES

FILE NUMBER:

PA 410325

Date:	4/13/2023
Time:	10:00
Project Name:	South Brooksville Stormwater Master Drainage Plan Update
District Engineer:	Chris Kuzlo
District ES:	Jeff Glas
Attendees:	Colin Miller (CMiller@mckimcreed.com), Tracey Webb, Regina Brachma, Ileana Rivera, Todd Crosby, Scott Herring, Timea Lewis

County: Hernando		**Sec/Twp/Rge:**	22,23,27,28,34,35/22/19
Total Land Acreage:		**Project Acreage:**	Vary (multiple projects)

Prior On-Site/Off-Site Permit Activity:

- Potential for a prior on-site permit activity. Depends on the location and footprint of the activity associated with the proposed Best Management Practice (BMP). Applicant to determine based on the proposed BMP.

Project Overview:

- Implementation of Best Management Practices (BMPs) from the South Brooksville Stormwater Master Drainage Plan Update.
- The study will be updated based on recent information (LiDAR, constructed projects, updated soil parameters, etc.). Additional BMPs may be identified based on the updated study.
- BMP 2 (a regional stormwater pond) will be constructed first and most likely will result in reduced peak stages and discharges. BMP 2 will also provide water quality treatment of the contributing drainage basin. The intent is to obtain water quality treatment credit which may be utilized as a compensatory treatment for future projects.
- In general, if projects involve alterations to existing unpermitted stormwater management systems that add additional treatment or attenuation capacity and result in reduced flooding of adjacent lands, activities may qualify for a General ERP pursuant to Rule 62-330.451, F.A.C. If projects involve alterations to existing permitted stormwater management systems, do not add additional treatment or attenuation capacity, or do not reduce flooding of adjacent lands, activities may qualify for an Individual ERP pursuant to Rules 62-330.315 or 62-330.054, F.A.C.
- An Individual SWERP for the BMP 2 will be required to establish baseline existing conditions for implementation of future BMPs as well as water quality treatment credit for future projects.

Environmental Discussion: (Wetlands On-Site, Wetlands on Adjacent Properties, Delineation, T&E species, Easements, Drawdown Issues, Setbacks, Justification, Elimination/Reduction, Permanent/Temporary Impacts, Secondary and Cumulative Impacts, Mitigation Options, SHWL, Upland Habitats, Site Visit, etc.)

- Wetlands/surface waters present – impact likely, scope unspecified.
- Provide the limits of jurisdictional wetlands and surface waters. Roadside ditches or other water conveyances, including permitted and constructed water conveyance features, can be claimed as surface waters per Chapter 62-340 F.A.C. if they do not meet the definition of a swale as stated under Rule 403.803 (14) F.S.
- Demonstrate elimination and reduction of wetland impacts. The elimination and reduction criteria can be found in subsection 10.2.1 of Applicant's Handbook Volume 1. Be advised that the use of subsection 10.2.1.2 (a) of the handbook may put the project in conflict with the state's 404 program. Coordination with the DEP, the during application review process, is recommended if the applicant wishes to use subsection 10.2.1.2 (a).
- Maintain minimum 15 foot, average 25 foot wetland conservation area setback or address secondary impacts.
- Provide appropriate mitigation using UMAM for impacts, if applicable.
- The site is located in the Withlacoochee River (and possibly the Upper Coastal) ERP Basin. Mitigation Banks that serve this area include the Boarshead, Green Swamp, Withlacoochee and Crooked River / Hilochee (Upper Coastal, Nature Coast, Aripeka, and Old Florida). For an interactive map of permitted

mitigation banks and their service areas, use this LINK. Be advised that use of a bank with a modified service area (i.e. a service area that is larger than the basin the bank is located in), may require the submittal of a cumulative impact analysis pursuant to subsection 10.2.8 of Applicant's Handbook volume 1.

- If the wetland mitigation is appropriate and the applicant is proposing to utilize mitigation bank credit as wetland mitigation, provide a letter of reservation of credits from the wetland mitigation bank. The wetland mitigation bank current credit ledgers can be found out the following link: https://www.swfwmd.state.fl.us/business/epermitting/environmental-resource-permit, Go to "ERP Mitigation Bank Wetland Credit Ledgers"
- Please demonstrate that adverse impacts to the wetland hydro-periods will not occur by providing hydrographs of the 2.33 year mean annual storm. The graph should start and end at the pop-off elevation with Existing Condition and Proposed Condition hydrographs superimposed for comparison. Please provide a supporting narrative for the hydrographs explaining any variations that are shown. The invert of the agricultural ditches may be the existing 'pop-off' elevation, or SHWL of the wetland and may need to be considered when designing the storm water management system.
- Determine SHWL's at pond locations, wetlands, and OSWs.
- Determine normal pool elevations of wetlands.
- Determine 'pop-off' locations and elevations of wetlands.
- Please note, the Florida Department of Environmental Protection (FDEP) has assumed the Federal dredge and fill permitting program under section 404 of the Federal Clean Water Act within certain waters. State 404 Program streamlining intentions direct Agency staff to coordinate joint site visits for overall consistency between the two State programs. As such, District staff and the FDEP will need to conduct a joint site visit for evaluation of the wetland/surface water systems proposed for impact. District staff will coordinate with FDEP staff on determining dates/times of joint Agency availability. Upon determination of joint availability, staff will provide the applicant's representative with site visit scheduling options. A site visit will not be scheduled until the appropriate signatures on the application and the fee is submitted.

Site Information Discussion: (SHW Levels, Floodplain, Tailwater Conditions, Adjacent Off-Site Contributing Sources, Receiving Waterbody, etc.)

- Watersheds – Bystre Lake. Watershed model information is available for download using the following link: https://watermatters.sharefile.com/d-s8c9019e00fd243908654e733a6b2016c
- WBIDs - Withlacoochee River (WBID 1329E). WBID is currently listed for nutrient related impairments. WBIDs need to be independently verified by the consultant.
- May discharge to a closed basin.
- Document/justify SHWE's (and infiltration rates as applicable) at pond locations, wetlands, and OSWs.
- Check FDEP MapDirect layer for possible contamination points within/adjacent to the project area. FDEP Map Direct.
- Any wells on site should be identified and their future use/abandonment must be designated.
- Stormwater retention and detention systems are classified as moderate sanitary hazards with respect to public and private drinking water wells. Stormwater treatment facilities shall not be constructed within 100 feet of an existing public water supply well and shall not be constructed within 75 feet of an existing private drinking water well. Subsection 4.2, A.H.V.II.

Water Quantity Discussions: (Basin Description, Storm Event, Pre/Post Volume, Pre/Post Discharge, etc.)

- For Individual ERP's - demonstrate projects will not cause adverse flooding on adjacent lands during the 2.33-year, 10-year, 25-year, and 100-year, 24-hour storm events. Any increases in flood stages on adjacent properties will require authorization from the property owner.
- For General ERP's pursuant to Rule 62-330.451, F.A.C. - demonstrate projects will reduce flooding on adjacent lands during the 2.33-year, 10-year, 25-year, and 100-year, 24-hour storm events.

Water Quality Discussions: (Type of Treatment, Technical Characteristics, Non-presumptive Alternatives, etc.)

- Demonstrate no net reduction in existing treatment capacity provided.
- For water quality treatment credit to be obtained via BMP 2, the compensatory treatment credit needs to be established based on the presumptive treatment criteria and nutrient loading analysis.
- Credit can be given only for those areas which do not receive any formal water quality treatment.

Sovereign Lands Discussion: (Determining Location, Correct Form of Authorization, Content of Application, Assessment of Fees, Coordination with FDEP)

- N/A.

Operation and Maintenance/Legal Information: (Ownership or Perpetual Control, O&M Entity, O&M Instructions, Homeowner Association Documents, Coastal Zone requirements, etc.)

- The permit must be issued to the entity that owns or controls the property.
- Provide evidence of ownership or control by deed, easement, contract for purchase, etc.

Application Type and Fee Required:

- SWERP General - Notice of Intent to Use an Environmental Resource General Permit - $250.
- SWERP Individual - Sections A, C, and E of the ERP Application.
- Fees will depend upon the project size and amount of WL/SW impacts. Consult the fee schedule for different thresholds.

Other: (Future Pre-Application Meetings, Fast Track, Submittal Date, Construction Start Date, Required District Permits – WUP, WOD, Well Construction, etc.)

- An application for an individual permit to construct or alter a dam, impoundment, reservoir, or appurtenant work, requires that a notice of receipt of the application must be published in a newspaper within the affected area. Provide documentation that such noticing has been accomplished. Note that the published notices of receipt for an ERP can be in accordance with the language provided in Rule 40D-1.603(10), F.A.C.

- The plans and drainage report submitted electronically must include the appropriate information required under Rules 61G15-23.005 and 61G15-23.004 (Digital), F.A.C. The following text is required by the Florida Board of Professional Engineers (FBPE) to meet this requirement when a digitally created seal is not used and must appear where the signature would normally appear:

  ELECTRONIC (Manifest): *[NAME] State of Florida, Professional Engineer, License No. [NUMBER] This item has been electronically signed and sealed by [NAME] on the date indicated here using a SHA authentication code. Printed copies of this document are not considered signed and sealed and the SHA authentication code must be verified on any electronic copies*

  DIGITAL: *[NAME] State of Florida, Professional Engineer, License No. [NUMBER]; This item has been digitally signed and sealed by [NAME] on the date indicated here; Printed copies of this document are not considered signed and sealed and the signature must be verified on any electronic copies.*

- Provide soil erosion and sediment control measures for use during construction. Refer to ERP Applicant's Handbook Vol. 1 Part IV Erosion and Sediment Control.

- Demonstrate that excavation of any stormwater ponds does not breach an aquitard (see Subsection 2.1.1, A.H.V.II) such that it would allow for lesser quality water to pass, either way, between the two systems. In those geographical areas of the District where there is not an aquitard present, the depth of the pond(s) shall not be excavated to within two (2) feet of the underlying limestone which is part of a drinking water aquifer. [Refer to Subsection 5.4.1(b), A.H.V.II]

- If lowering of SHWE is proposed, then burden is on Applicant to demonstrate no adverse onsite or offsite impacts as per Subsection 3.6, A.H.V.II. Groundwater drawdown 'radius of influence' computations may be required to demonstrate no adverse onsite or offsite impacts. Please note that new roadside swales or deepening of existing roadside swales may result in lowering of SHWE. Proposed ponds with control elevation less than SHWE may result in adverse lowering of onsite or offsite groundwater.

- On December 17, 2020, the Environmental Protection Agency (EPA) formally transferred permitting authority under CWA Section 404 from the U.S. Army Corps of Engineers (Corps) to the State of Florida for a broad range of water resources within the State. The primary State 404 Program rules are adopted by the Florida Department of Environmental Protection (FDEP) as Chapter 62-331 of the Florida Administrative Code (F.A.C.). While the State 404 Program is a separate permitting program from the Environmental Resource Permitting program (ERP) under Chapter 62-330, F.A.C., and agency action for State 404 Program verifications, notices, or permits shall be taken independently from ERP agency action, the FDEP and the Southwest Florida Water Management District (SWFWMD) will be participating in a Joint application Process. Upon submittal of an ERP application that proposes dredge/fill activities in wetlands or surface waters within state assumed waters, the SWFWMD will forward a copy of your application to the FDEP for activities under State 404 jurisdiction. The applicant may choose to have the State 404 Program and ERP agency actions issued concurrently to help ensure consistency and reduce the need for project modifications that may occur when the agency actions are issued at different times. Additional information on the FDEP's

404 delegation can be found at: https://floridadep.gov/water/submerged-lands-environmental-resources-coordination/content/state-404-program

- Additionally, for those projects located in areas where the Corps retains jurisdiction, the applicant is advised that the District will not send a copy of an application that does not qualify for a State Programmatic General Permit (SPGP) to the U.S. Army Corps of Engineers. If a project does not qualify for a SPGP, you will need to apply separately to the Corps using the appropriate federal application form for activities under federal jurisdiction. Please see the Corps' Jacksonville District Regulatory Division Sourcebook for more information about federal permitting. Please call your local Corps office if you have questions about federal permitting. Link: http://www.saj.usace.army.mil/Missions/Regulatory/Source-Book/

Disclaimer: The District ERP pre-application meeting process is a service made available to the public to assist interested parties in preparing for submittal of a permit application. Information shared at pre-application meetings is superseded by the actual permit application submittal. District permit decisions are based upon information submitted during the application process and Rules in effect at the time the application is complete.
