Hoffkleinhaus property narrative description.

1.) Proposed usage for the parcel key 01354947 2 acre property. Property will have 18 units no larger than 500 ft<sup>2</sup>. And one common house up to 2,000 ft<sup>2</sup> with outdoor pavilion.

2.) The property consists of two acres and is currently zoned residential usage.

3.) The property is low lying and has a drainage stream in the middle of the property. We want to make an effort to impact the property in the least way possible. We were going to try and integrate more walking trails to the sites themselves rather than roads for the short term rentals.

4.) Current house is not designed to fill the need which majority of people have. Lower cost of living and a better quality of living.

The community should consist of 18 tiny home units. 12 full time units and 6 Short term nightly/weekly units

Each unit will be no larger than 500 ft<sup>2</sup> and be designed either on wheels or in a pre-manufactured style and brought on site and be placed on an RV pad 20ft x 20ft. The common house up to 2,000 ft<sup>2</sup> in size and may contain an outdoor pavilion. Additional laundry, bathroom with showers, and common dining space is placed in the common house.

To encourage ownership The property is to be set up in a co-op structure. With the Co-op structure each shares will representing ownership of the RV pad space up to 12.

12 of the tiny home units will be dedicated to full-time residential living. 6 units will be dedicated to short-term or tourism rental in which the money raised through these rentals will help to offset expenses to the entire community and any additional moneys will go to the shareholders of the co-op.

Each share would get a vote in the greater community.

The goal of the co-op would be firstly to drive the cost of housing down and provide a sense of ownership and building attainable housing cost without undue burden to the community.

Secondly the focus on building the community experience itself. encouraging architectural items that bring cohesiveness such as front and rear porches on each of the units, retain as much nature as possible and encourage natural landscaping. Another element could be meeting regularly for community dinners.

Lastly to be a part greater community and provide resources to encourage better and smarter growth.

Property setbacks and lots would be further considered pending input and approval from the commission. As this is a new type of project we would need to get an engineering firm in place to design the site layout. However the common number of sites in a RV park can be anywhere from 10 to 15 units per acre.

5.) Property would be connected to Brooksville City water and the sewer system would be a septic tank unless I could get access to city sewer hookup.

Most impact would be to increase traffic

Would try to limit impact to the natural environment on the property itself by limiting removal of nature landscape.

6.) Water would be hooked up through the the city of Brooksville

Sewer would be connected to a septic tank unless the option to get hooked up to the city sewer was available
