Planning Department

Project Location: The property in question is 28.6 acres. It is located east of the Suncoast Parkway, west of Winter Street, and north of SR 50 (Cortez). It is in Section 26, Township 22 South, Range 18 East Hernando County. It is known as Key numbers 346165 and 346227.

Present Zoning: The land is presently zoned AG.

Present Land use: The land is currently designated as Residential.

Desired Zoning: The applicant is desirous to rezone the property to PDP(SF) with the submitted master plan

Summary of Request: The applicant is desirous to rezone the property to PDP(SF) to develop thirty nine (39) lots for single family homes. The typical lot size is 0.4 acres. (116.50' x 150.00')

Internal Setbacks: Front: 25'
Sides: 10'
Rear: 20'

No deviations in setbacks are being requested.

Buffers: The proposed use will abut AG land to the south and north. A five foot existing vegetative buffer is proposed on both the north and south. For the residential lots protection, a twenty foot buffer is proposed along the Suncoast Parkway. The proposed lots to the east are separated from the existing residential lots adjacent and fronting on Crespa St., by an existing 15' RW apparently owned by Hernando County. These rights-of-way are random throughout the Potterfield Garden Acre subdivisions. This right-of-way may be vacated in the future, but is much too small to be utilized in present day situations. If approved, the Developer will attempt to vacate this r/w by contacting the aforementioned adjacent lots to the east. It can only be vacated through their cooperation.

Access: The site is accessed from Jernigan Street, a county-owned right-of-way. As previously talked about in the buffers, an existing county-owned r/w extends from Jernigan to the west. The proposed design utilizes this r/w and provides additional land to create a 60' r/w into the project. That portion of the r/w will be improved with the development to continue Jernigan St. into the development.

Other Rights-of-Way (r/w): An additional r/w only 15' in width exists north to south across proposed lots 14-23. The intent is to vacate this entire r/w prior to platting. If approved, this Developer will own both sides of this r/w and can complete the application process without reliance from the neighbors.

Soils: According to information found on the NRCS database, the existing soils are Candler fine sand. The soils are well drained soils, this is typical in this area.

Streets: Jernigan Street is an existing county r/w, but unimproved to the west of its terminus at this project's east boundary. All proposed streets will meet the County's Facilities Design Guidelines without any deviations. The streets and storm sewer system will be dedicated to Hernando County upon recording of the record plat.

Hernando County, Florida

Sanitary Sewer: The project will be served by septic tanks. The calculations indicate approximately 57 septic systems could be installed on this property with extension of the County's water system. We are only proposing 39.

Potable Water: If approved, the Developer will extend the County-owned water system into this project. We have received location maps from HCUD which show the closest lines to be an 8" on Jernigan at the intersection of Crespa. All costs of such expansion would be borne by the Developer. At time of record plat, these improvements would be dedicated to HCUD.

Environmental: The existing soils and vegetation support habitat for gopher tortoise. The Developer will, prior to any construction, conduct a wildlife assessment.

Floodplain: The project is located within the Wiscon Basin. The FEMA map indicates the entire project is located in Zone X. There are no flood plain nodes from the Wiscon study located within the Project boundary.

Drainage: If approved, the project will be reviewed for drainage improvements and its effect on neighboring lands by Hernando County and the Southwest Florida Water Management District (SWFWMD). The site will be required to meet the following, for the major system:

- Water quality capture and treatment
- 25 Year peak rates of flow attenuation
- 100 Year detention of runoff volume.

One large retention area is proposed against the Suncoast Parkway at the existing low areas. This area will be improved to the design calculation specifications. The system will recover through percolation of the existing soils.

Traffic: Based on the latest tables from the ITE manual, the proposed project may generate up to 39 Peak Hour PM Trips. This will be further addressed at the time of concurrency when a traffic study may be required.
