Introduction

VHB has been retained by Hillpointe, LLC to conduct a traffic study for the proposed Hillpointe Apartments to be located on Astaire Lane, west of Barclay Avenue in Hernando County, Florida. The purpose of this study is to fulfill the Concurrency Approval for the project per the requirements set forth by Hernando County. The analysis quantifies both the existing traffic conditions along area roadways surrounding the parcel and the projected future traffic conditions expected for the Build condition. This document provides a detailed description of the study analysis and key findings.

Project Description

The proposed development will include 348 multi-family mid-rise dwelling units, with a buildout date of 2024. It will be located on Astaire Lane, west of Barclay Avenue in Hernando County, Florida. Access is provided on Astaire Lane. The speed limit on Barclay Avenue is 50 mph. The project location is illustrated in **Figure 1**. A preliminary site plan, along with the approved methodology is provided in **Appendix A**.

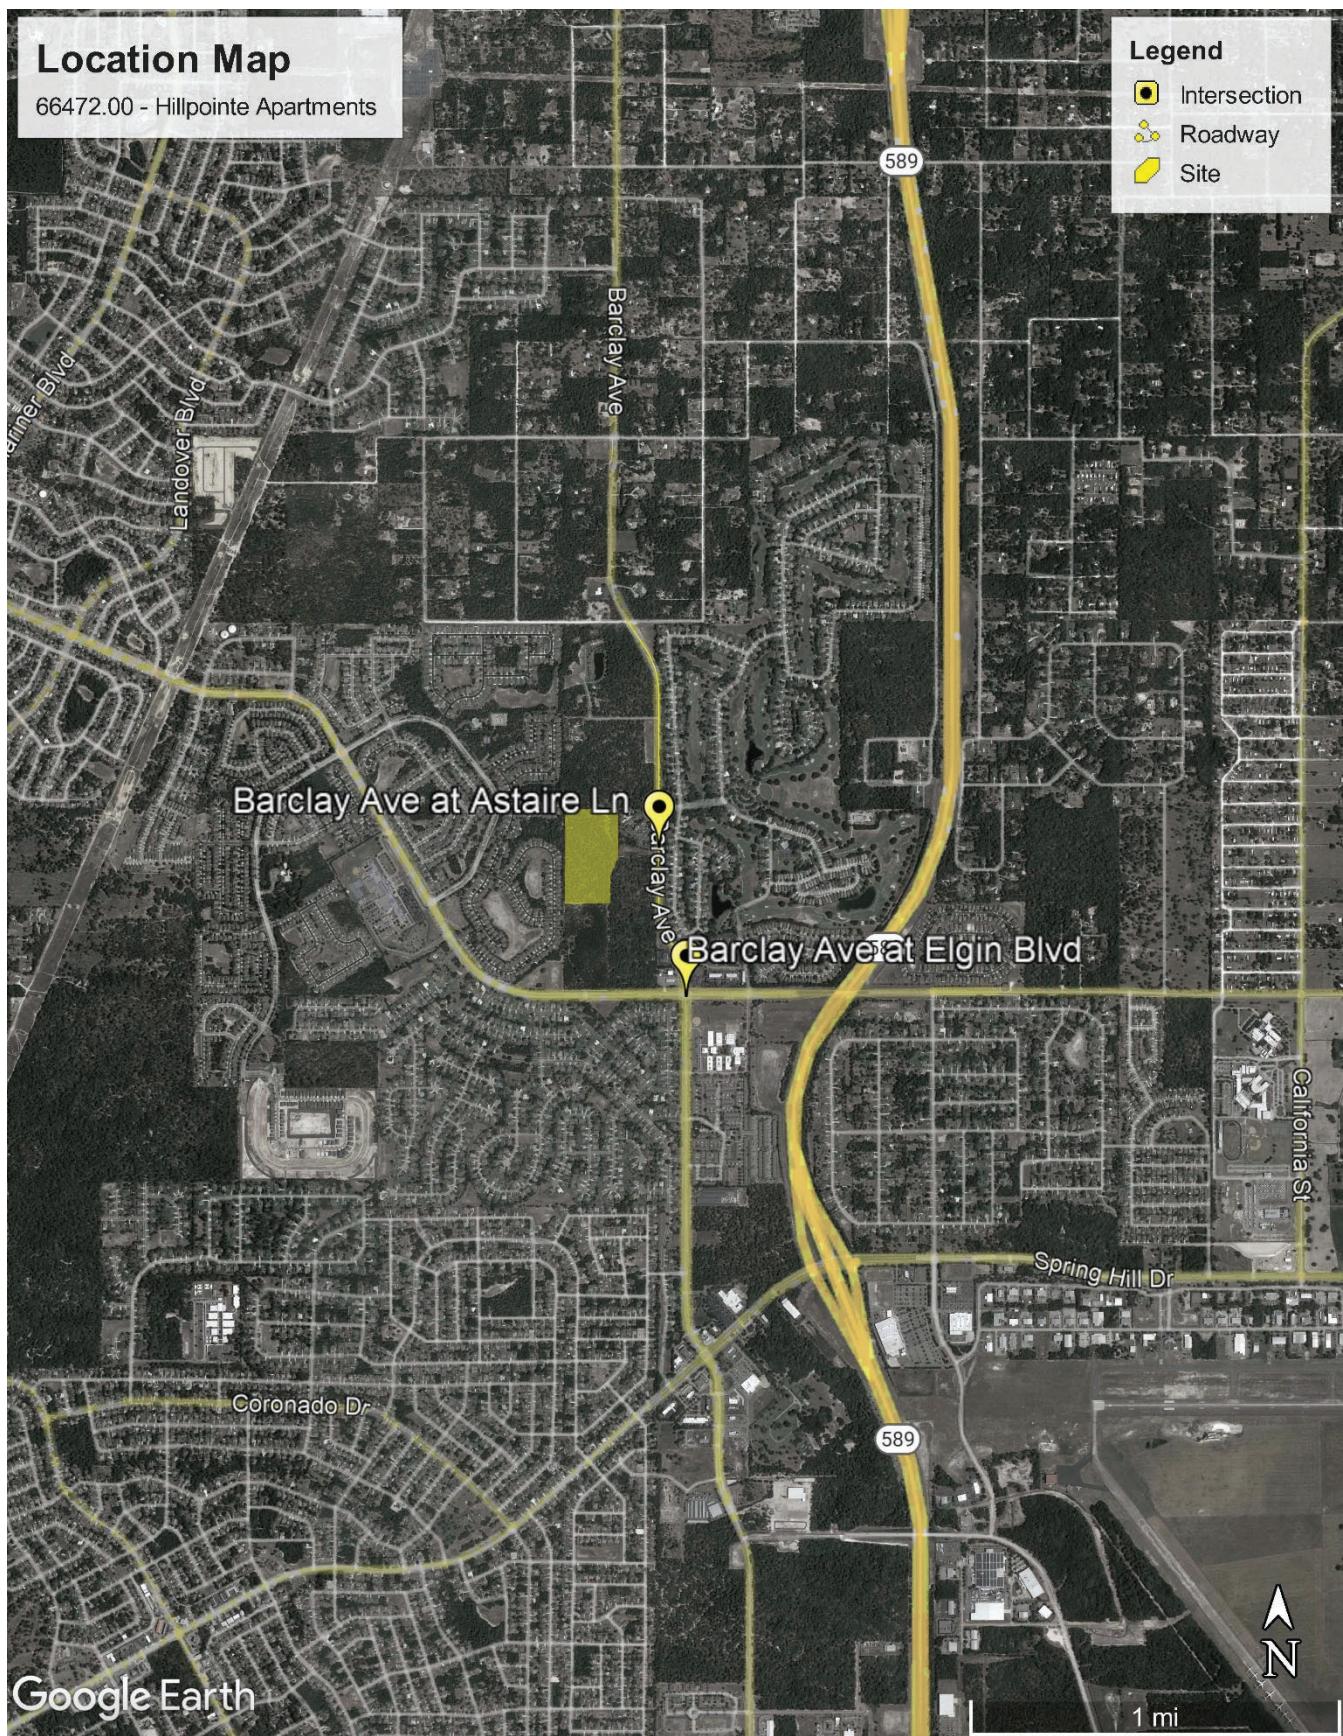

Figure 1 Location Map

Trip Generation

The project's daily and peak hour trips were calculated based on the Institute of Transportation Engineers' (ITE) *Trip Generation Manual*, 11th Edition. As shown in **Table 1**, ITE Land Use Code 221 – Multi-Family Mid-Rise was deemed the most appropriate for the proposed development. It is expected to generate 1,614 new daily external trips, 142 (33 in, 109 out) new AM peak hour external trips, and 136 (83 in, 53 out) new PM peak hour external trip for the build out conditions. The ITE Land Use sheets can be found in **Appendix B**.

Table 1 Trip Generation

| Land Use | ITE Code | Intensity | Daily Trip Ends | AM Peak Period | | | PM Peak Period | | |
|---------------------------------|----------|-----------|-----------------|----------------|------------|------------|----------------|-----------|------------|
| | | | | In Trips | Out Trips | Total | In Trips | Out Trips | Total |
| Multi-Family Housing (Mid-Rise) | 221 | 348 DU | 1,614 | 33 | 109 | 142 | 83 | 53 | 136 |
| Total | | | 1,614 | 33 | 109 | 142 | 83 | 53 | 136 |

Source: *ITE Trip Generation, 11th Edition*

Trip Distribution and Assignment

The distribution of site generated traffic is a function of population in surrounding areas, shopping opportunities, existing travel patterns, ease of access to the site, and traffic conditions on area roadways. Distribution was determined using the adopted Tampa Bay Regional Planning Model (TBRPM) and reviewed for reasonableness. The trip distribution is shown in **Figure 2**; a more detailed trip distribution print out is shown in **Appendix E**.

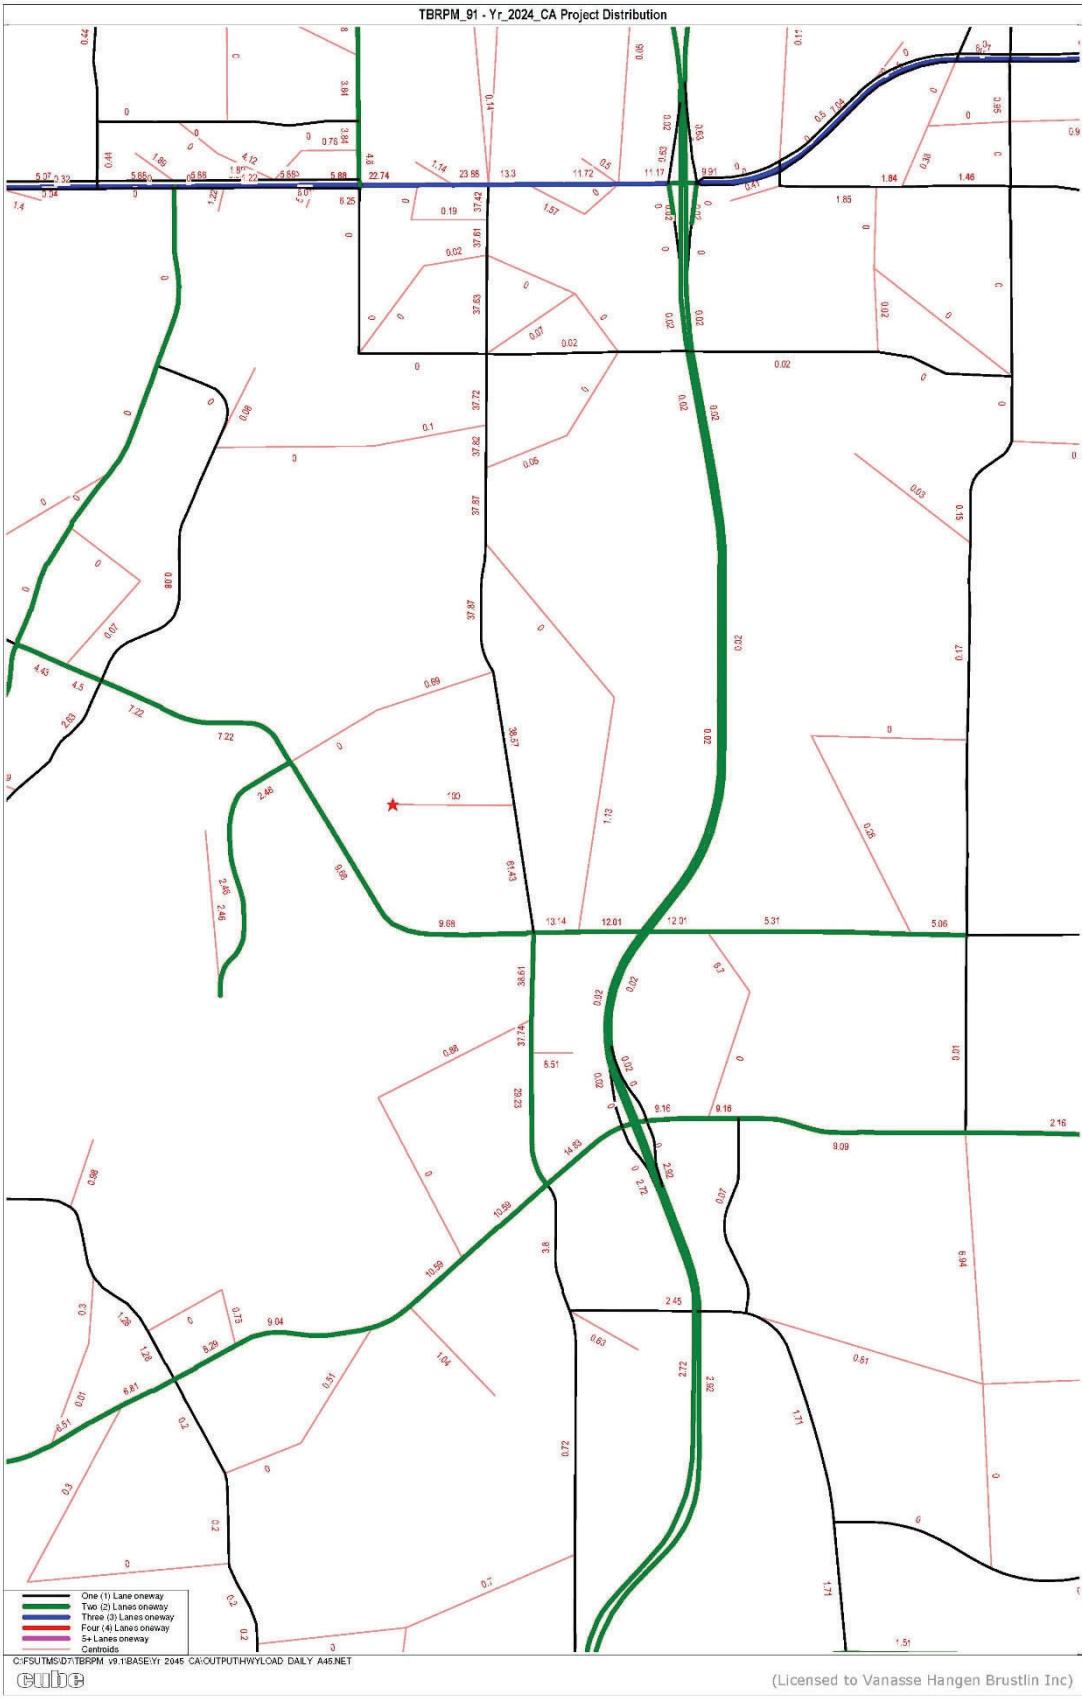

Figure 2 Trip Distribution

2

Existing Conditions

Study Area

Impacted segments will include any public roadway segment where the net new traffic from the proposed project is at least 5% of the Generalized Peak Hour Directional Maximum Service Volume of the roadway. Additionally, any signalized or major unsignalized intersections were determined to be in the study area if they are along a significant roadway. **Table 2** presents the significance of project impacts to the roadway network for the PM peak hour condition at project buildout.

Table 2 Project Impact Significance

| PM PEAK HOUR | | No. of Lanes | Adopted LOS | PH2W MSV | Project Dist | Trips | % | Significance (Yes/No) |
|--|--|--------------|-------------|----------|--------------|-------|------|-----------------------|
| Barclay Ave from Spring Hill Drive to CR 572 | | 4 | D | 3,222 | 38.6% | 53 | 1.6% | No |
| Barclay Ave from CR 572 to Astaire Ln | | 2 | D | 1,440 | 61.4% | 84 | 5.8% | Yes |
| Barclay Ave from Astaire Ln to San Antonio Rd | | 2 | D | 1,440 | 38.6% | 52 | 3.6% | No |
| Barclay Ave from San Antonio Rd to SR 50 | | 2 | D | 1,440 | 38.6% | 52 | 3.6% | No |
| Elgin Blvd from Mariner Blvd to Barclay Ave | | 4 | D | 3,222 | 9.7% | 13 | 0.4% | No |
| Powell Rd from Barclay Ave to US 41 | | 2 | D | 1,440 | 13.1% | 18 | 1.3% | No |
| Cortez Blvd from Mariner Blvd to Barclay Blvd | | 6 | C | 5,250 | 23.9% | 32 | 0.6% | No |
| Cortez Blvd from Barclay Blvd to Suncoast Pkwy | | 6 | C | 5,250 | 13.3% | 18 | 0.3% | No |

For the purposes of this study, the roadway segment of Barclay Avenue from CR 572 to Astaire Lane will be evaluated, based on significance. Barclay Avenue from Astaire Lane to San Antonio will also be included in the study area since it is adjacent to the project entrance.

In addition, the following intersections were analyzed:

1. Barclay Avenue at Astaire Lane
2. Barclay Avenue at Elgin Boulevard/Powell Road

Turning movement counts were collected on July 12, 2022, during the AM (7:00-9:00AM), and PM (4:00-6:00PM) peak periods. The peak hour for each analysis intersection was determined based on these counts. These peak hour volumes were adjusted using their corresponding seasonal factor to reflect average conditions and form the basis of the traffic analysis. A copy of the data collected and seasonal factors from FDOT Florida Traffic Online reports are found in **Appendix C**. A seasonal adjustment factor of 1.05 was applied based on the count date. The existing turning movement volumes after seasonal factor adjustment are shown in **Figure 3**.

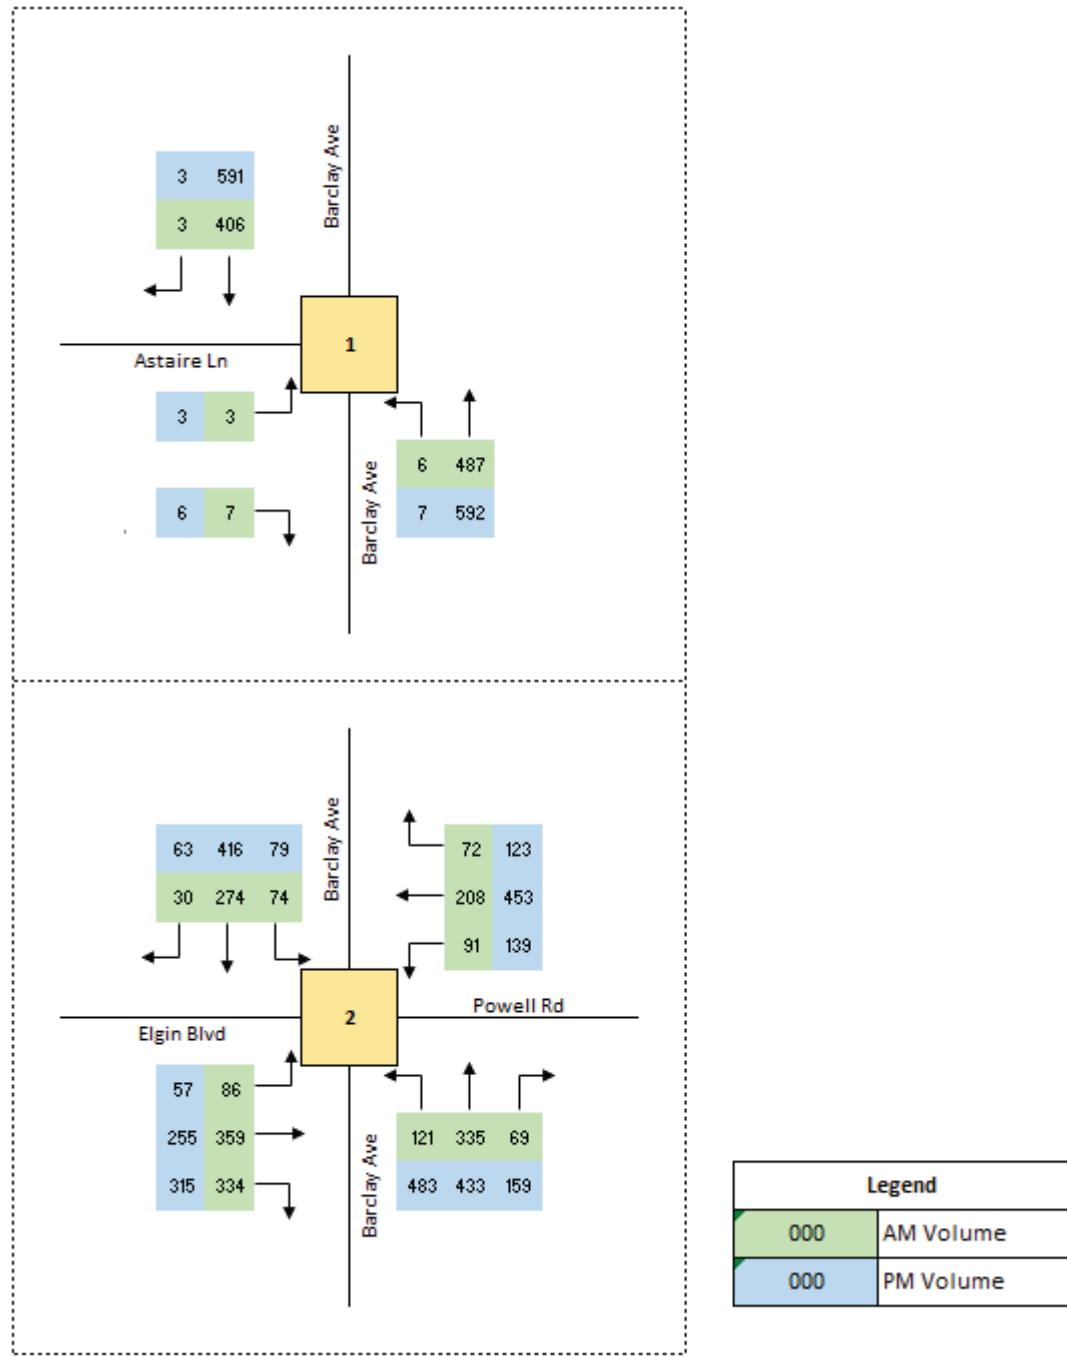

Figure 3 Existing AM/PM Peak Hour Turning Movement Volumes

Existing Roadway Capacity Analysis

VHB conducted an assessment to determine the existing level of service of the study roadways. The level of service (LOS) of a given roadway is related to prevailing traffic volumes and to capacity, which is defined as the maximum number of vehicles that can pass through a roadway section during a specified period. The capacity of a roadway is determined by several factors including composition of traffic (cars, buses, and trucks); roadway alignment; width and number of lanes; posted travel speeds and other variables.

The LOS and remaining capacity for each of the study roadways were determined based on the 2020 FDOT QLOS General Service Volumes. The existing roadway capacity analysis was performed for all roadways within the study area as shown in **Table 3**. In summary, the study roadway has an acceptable v/c ratio under existing conditions.

Table 3 Existing Roadway Capacity Analysis

| PM PEAK HOUR | No. of Lanes | Adopted LOS | 2021 FTO | | PH2W | | Existing V/C | Remaining Capacity | Over Capacity? |
|---|---------------------|--------------------|-----------------|----------|---------------|------------|---------------------|---------------------------|-----------------------|
| Roadway | | | AADT | K | Volume | MSV | | | |
| Barclay Ave from CR 572 to Astaire Ln | 2 | D | 12,500 | 9.0% | 1,125 | 1,440 | 0.781 | 315 | No |
| Barclay Ave from Astaire Ln to San Antonio Rd | 2 | D | 12,500 | 9.0% | 1,125 | 1,440 | 0.781 | 315 | No |

Existing Intersection Capacity Analysis

The existing intersections were evaluated using the methodology outlined in the Highway Capacity Manual (HCM) and using the Synchro 11.0 software. A seasonal factor was applied to the existing counts. The results of the intersection capacity analysis for the AM and PM peak hours are shown, in **Table 4**. The existing HCM 6 intersection report printouts are provided in **Appendix D**. As **Table 4** indicates, no individual movement reaches a LOS F or a v/c of 1.0.

v/c: Volume to capacity ratio

Delay: Average delay in seconds per vehicle

LOS: Level of Service

HCM 6th Edition based on Synchro 11 Results are reported

3

Future Conditions

The future background traffic was developed based on growth rates derived from historic AADTs. Vested traffic was added from the Village Van Gogh, Jumper Loop and Lucky Lane Residential developments. Additionally, the anticipated number of trips generated from the Hillpointe Multi-family development were calculated based on the trip generation rates/equations obtained from the ITE Trip Generation Manual, 11th Edition and distributed to the roadways and intersections based on site layout and trip distribution. The intersection volume derivation is documented in **Appendix E**.

2025 Future Roadway Capacity Analysis

The future capacity analysis for the study area roadways for the project build out can be found in **Table 5** for the PM peak hour condition. As described in the approved methodology document, the future conditions analysis assumes the two to four-lane widening of Barclay Avenue from Powell Road to N San Antonio Road. The latest roadway improvements plans are included in **Appendix F**. Based on coordination with Hernando County staff, the roadway plans are anticipated to be updated prior to construction of the improvements.

The analysis shows that all the study roadways will continue to operate with an acceptable v/c ratio in the build out condition.

Table 5 Future Roadway Capacity Analysis

| PM PEAK HOUR | | No. of Lanes | Adopted LOS | 2021 FTO | | PH2W | | Growth % | 2024 Growth | Lucky Lane | Jumper Loop | Village Van Gogh | Total Vested | 2024 Background Volume | PH2W v/c | Deficient? | Project Dist | Trips | 2024 Build Out Volume | PH2W v/c | Deficient? |
|---|---|--------------|-------------|----------|-------|--------|------|----------------|-------------|------------|-------------|------------------|--------------|------------------------|----------|------------|--------------|-------|-----------------------|----------|------------|
| Roadway | | | | AADT | K | Volume | MSV | R ² | | | | | | | | | | | | | |

| Barclay Ave from Astaire Ln to San Antonio Rd | 4 | D | 12,500 | 9.0% | 1,125 | 3,222 | 0.74 | 1.8% | 62 | 28 | 46 | 12 | 86 | 1,273 | 0.395 | No | 38.6% | 52 | 1,325 | 0.411 | No |

Future Intersection Capacity Analysis

To determine the operational conditions at the intersections and project driveways, intersections were evaluated for the PM peak hour and AM peak hour conditions using Synchro 11 software (HCM 6 methodology). As documented in the methodology document, the future conditions analysis for the background and buildup scenarios assumes the two to four-lane widening of Barclay Avenue from Powell Road to N San Antonio Road, as well as the traffic signal retiming for Barclay Avenue at Powell Road/Elgin Boulevard. The results of the intersection capacity analysis are shown in **Table 6**. The future HCM reports are provided in **Appendix G**. **Figure 4** illustrates the AM peak hour future traffic volumes. **Figure 5** illustrates the PM peak hour future traffic volumes. As seen in **Table 6**, no individual movement is anticipated to operate at LOS F or a v/c of 1.0.

Table 6 Intersection Capacity Analysis – Future Conditions

| Intersection | Control | Movement | Background | | | | | | Buildout | | | | | |
|--|---------|----------------|------------|-------|-----|------|-------|-----|----------|-------|-----|-----|-------|-----|

HCM 6th Edition based on Synchro 11 Results are reported

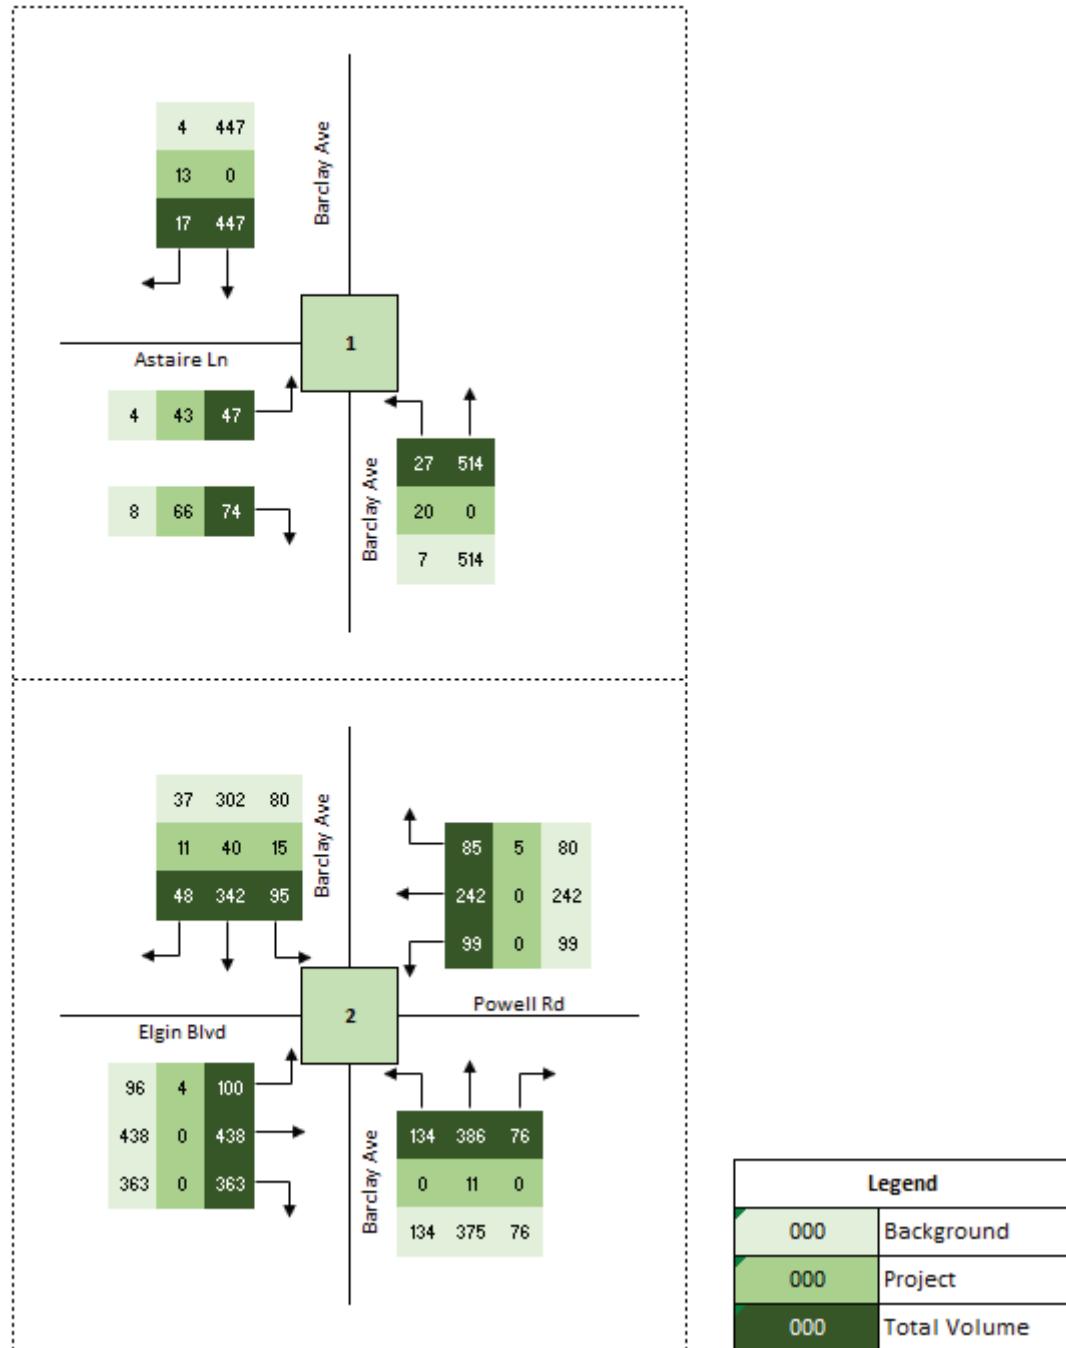

Figure 4 Future Turning Movement Volumes - AM Peak Hour

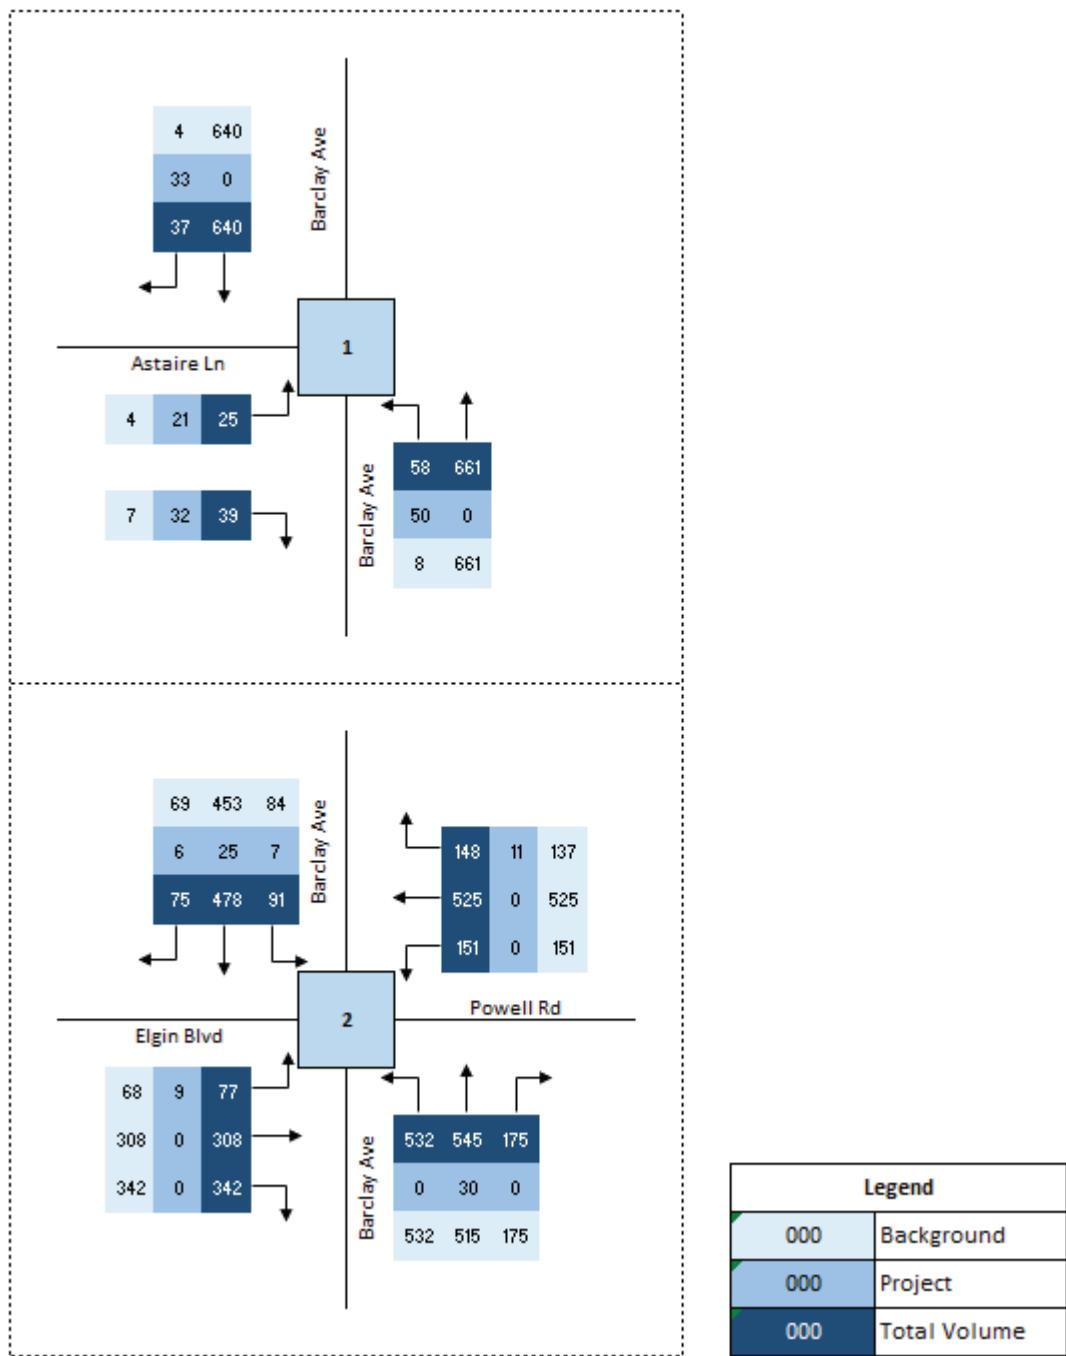

Figure 5 Future Turning Movement Volumes - PM Peak Hour

Intersection Queue Analysis

An intersection queue analysis was performed for turning movements at the project entrance. The analysis compares the existing storage length to the 95th percentile queues for future build conditions in both the AM and PM peak periods. The Synchro movement queue printouts are provided in the **Appendix G**. As part of the project widening Barclay Avenue from Powell Road to N San Antonio Road, a 295 foot long left turn bay will be provided on the northbound approach to the intersection of Barclay Avenue at Astaire Lane. In addition, the stop-controlled eastbound approach of Astaire Lane has 230 feet of queue storage before the retirement home driveway. As the queue lengths in **Table 7** demonstrate, the available queue storage lengths at the unsignalized intersection of Barclay Avenue and Astaire Lane are more than adequate to accommodate the 95th percentile queues during peak hour conditions.

Table 27 in the *FDOT Access Management Guidebook* provides a warrant threshold of 55 peak hour right turning vehicles for an exclusive right turn lanes to an unsignalized driveway on a multilane highway with a posted speed above 45 mph. The PM peak hour southbound right turn demand is 37 vehicles per hour at the intersection of Barclay Avenue and Astaire Lane. Therefore, a southbound right turn lane is not warranted based on NCHRP 420 as cited in the FDOT Access Management Guidebook's Table 27.

Table 7 Intersection Queue Analysis – Future Conditions

| Intersection | Control | Movement | Storage Length (ft) | Background | | | | Project | | | |
|--------------------------------|---------|----------|---------------------|-----------------|----------------|-----------------|----------------|---------|-----|-----|-----|
| | | | | 95%-ile Q (veh) | 95%-ile Q (ft) | 95%-ile Q (veh) | 95%-ile Q (ft) | AM | PM | AM | PM |
| Barclay Avenue at Astaire Lane | TWSC | EBL | 230 | 0.0 | 0.0 | 0 | 0 | 0.4 | 0.3 | 10 | 7.5 |
| | | EBR | 230 | 0.0 | 0.0 | 0 | 0 | 0.3 | 0.2 | 7.5 | 5 |
| | | NBL | 295 | 0.0 | 0.0 | 0 | 0 | 0.1 | 0.2 | 2.5 | 5 |

4

Conclusions

This traffic analysis has been prepared in support of obtaining concurrency approval through Hernando County for the proposed Hillpointe Multi-family development to be located on Astaire Lane, west of Barclay Avenue in Hernando County, Florida.

Summary of Study Findings

- › The proposed development is expected to generate 1,614 new daily external trips, 142 (33 in, 109 out) new AM peak hour external trips, and 136 (83 in, 53 out) new PM peak hour external trip for the build out conditions with an anticipated buildup of 2024.
- › The existing roadway analysis shows all study roadways have an acceptable v/c ratio.
- › The existing intersection capacity analysis shows both study intersections operate at acceptable LOS and v/c in the existing conditions.
- › The 2024 future conditions analysis shows that all study roadways will continue to operate with an acceptable v/c ratio in the buildup condition with the planned improvements implemented.
- › The 2024 future intersection capacity analysis shows that all intersections operate at acceptable LOS and delay with the planned improvements implemented in the build out conditions.
- › A southbound right turn lane is not warranted based on NCHRP 420 as cited in the FDOT Access Management Guidebook's Table 27.

The surrounding roadway network does not show any additional deficiencies with the anticipated traffic increases generated by the proposed development. The development impacts have been analyzed for a year 2024 Full Build Out scenario.

Re: Traffic Impact Study Methodology Letter
Hillpointe Apartments

CC: Thomas Wiggins, E.I.

Introduction:

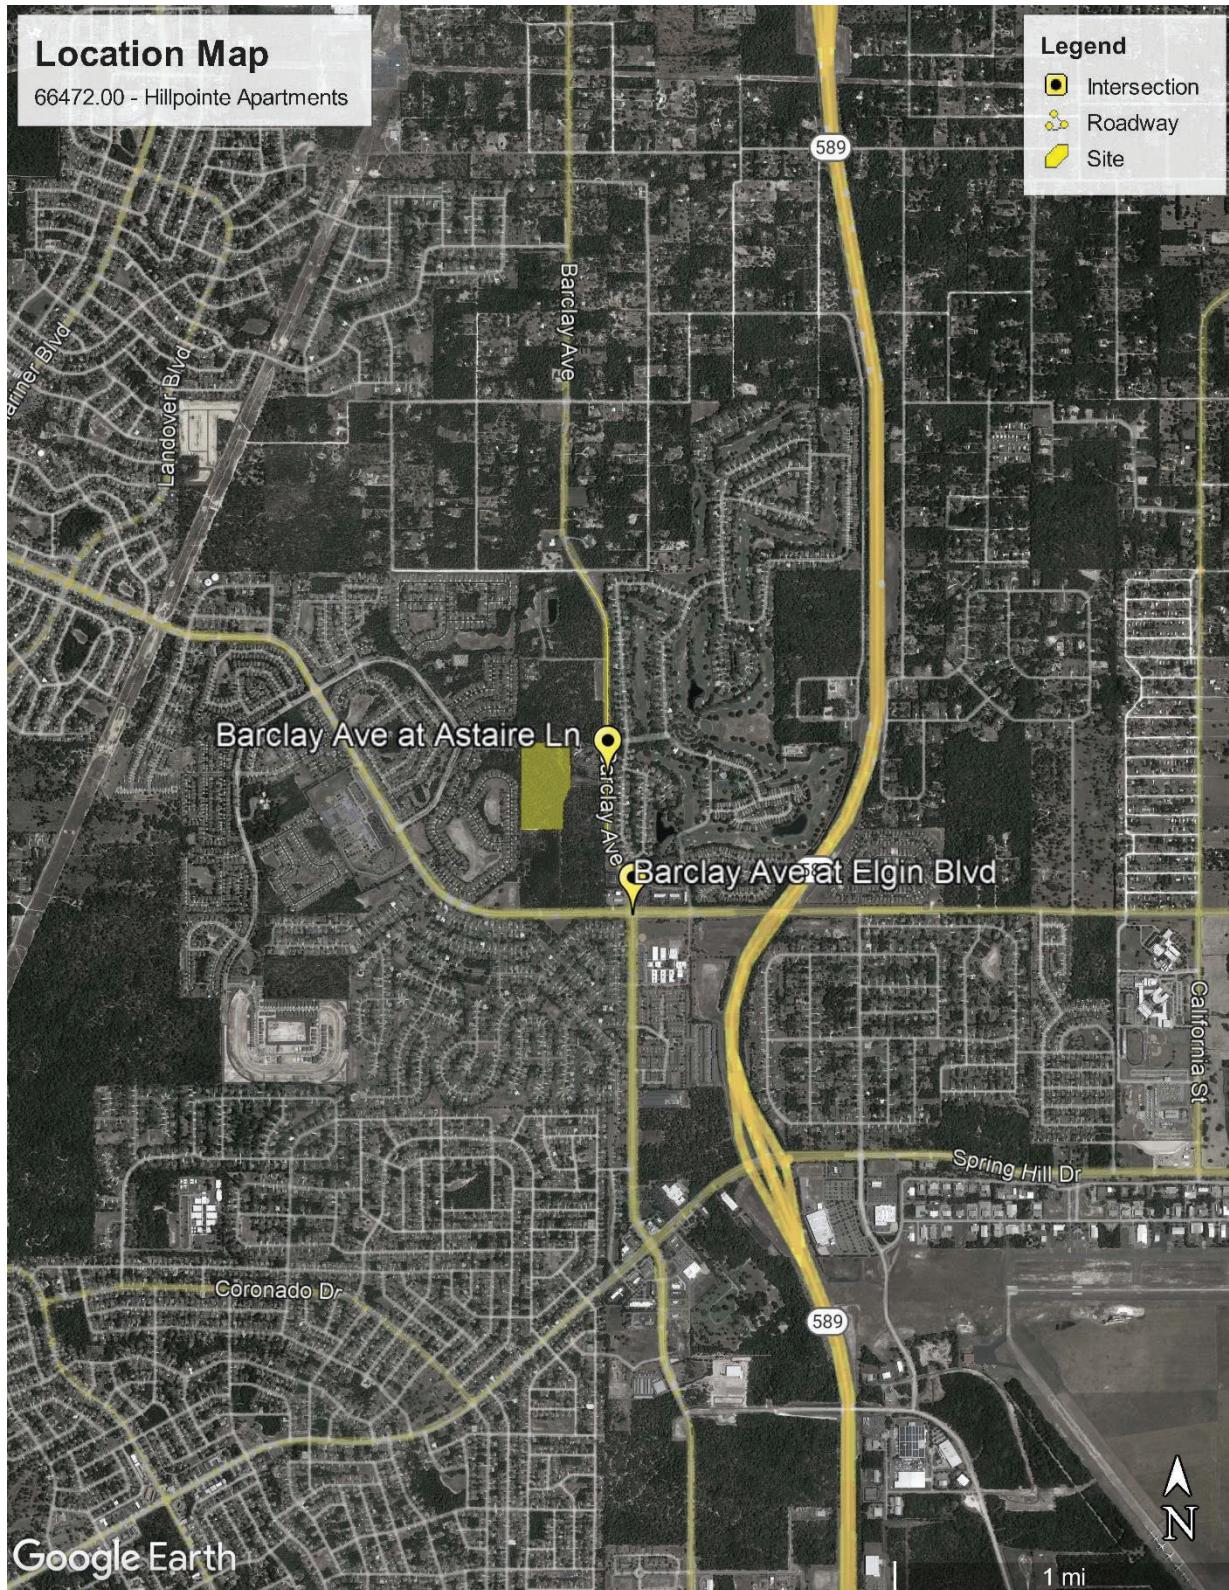

The following memorandum provides the proposed methodology to evaluate the transportation impacts associated with the planned apartment development located in Hernando County, on property zoned PDP-Multifamily, with a direct connection to Barclay Avenue via the intersection with Astaire Lane. This intersection is located approximately 2,200 feet north of the Barclay Avenue/Elgin Boulevard/Powell Road (CR572) intersection in the eastern Springhill area as shown in **Figure 1**. A copy of the concept plan is shown in **Figure 2**.

Trip Generation Estimate

The proposed development program for the site includes 348 2-bedroom apartment units that will be constructed in approximately 15 different buildings. The project will also include a recreation/clubhouse facility for the residents. The project traffic volumes for the proposed development will be generated using the trip generation rates and formulas outlined in the *Institute of Transportation Engineers (ITE) Trip Generation Manual (11th Edition)*. **Table 1** is an estimation of the daily, AM peak-hour, and PM peak-hour volumes. The relevant ITE worksheets are attached.

Table 1: Summary of Trip Generation

| Land Use | ITE Code | Intensity | Daily Trip Ends | AM Peak Period | | | PM Peak Period | | |
|---------------------------------|----------|-----------|-----------------|----------------|-----------|-------|----------------|-----------|-------|
| | | | | In Trips | Out Trips | Total | In Trips | Out Trips | Total |
| Multi-Family Housing (Mid-Rise) | 221 | 348 DU | 1,614 | 33 | 109 | 142 | 83 | 53 | 136 |

Trip Distribution & Assignment

The project traffic will be distributed to the adjacent roadways and intersections based on the YR 2024 Tampa Bay Regional Planning Model (TBRPM) results, utilizing the existing and committed network. The distribution can be found on **Figure 3**.

Primary Impact Area

Impacted segments will include any public roadway segment where the net new traffic from the proposed project is at least 5% of the Generalized PM Peak Hour Directional Maximum Service Volume of the roadway. Additionally, any signalized or major unsignalized intersections will be determined to be in the study area if they are along a significant roadway. The test for segments that are significantly impacted is shown in **Table 2**.

Table 2: Project Significance

| Roadway | No. of Lanes | Adopted LOS | PH2W MSV | Project | | Significance | |

Source: FDOT 2020 Quality/Level of Service (QLOS) Handbook, VHB

For the purposes of this study, VHB proposes to evaluate the roadway traffic volumes of Barclay Avenue from CR 572 to Astaire Lane, based on significance. Barclay Avenue from Astaire Lane to San Antonio will also be included as well since it is adjacent to the entrance. In addition, the following have been identified as "major" intersections along significant roadways and will be analyzed:

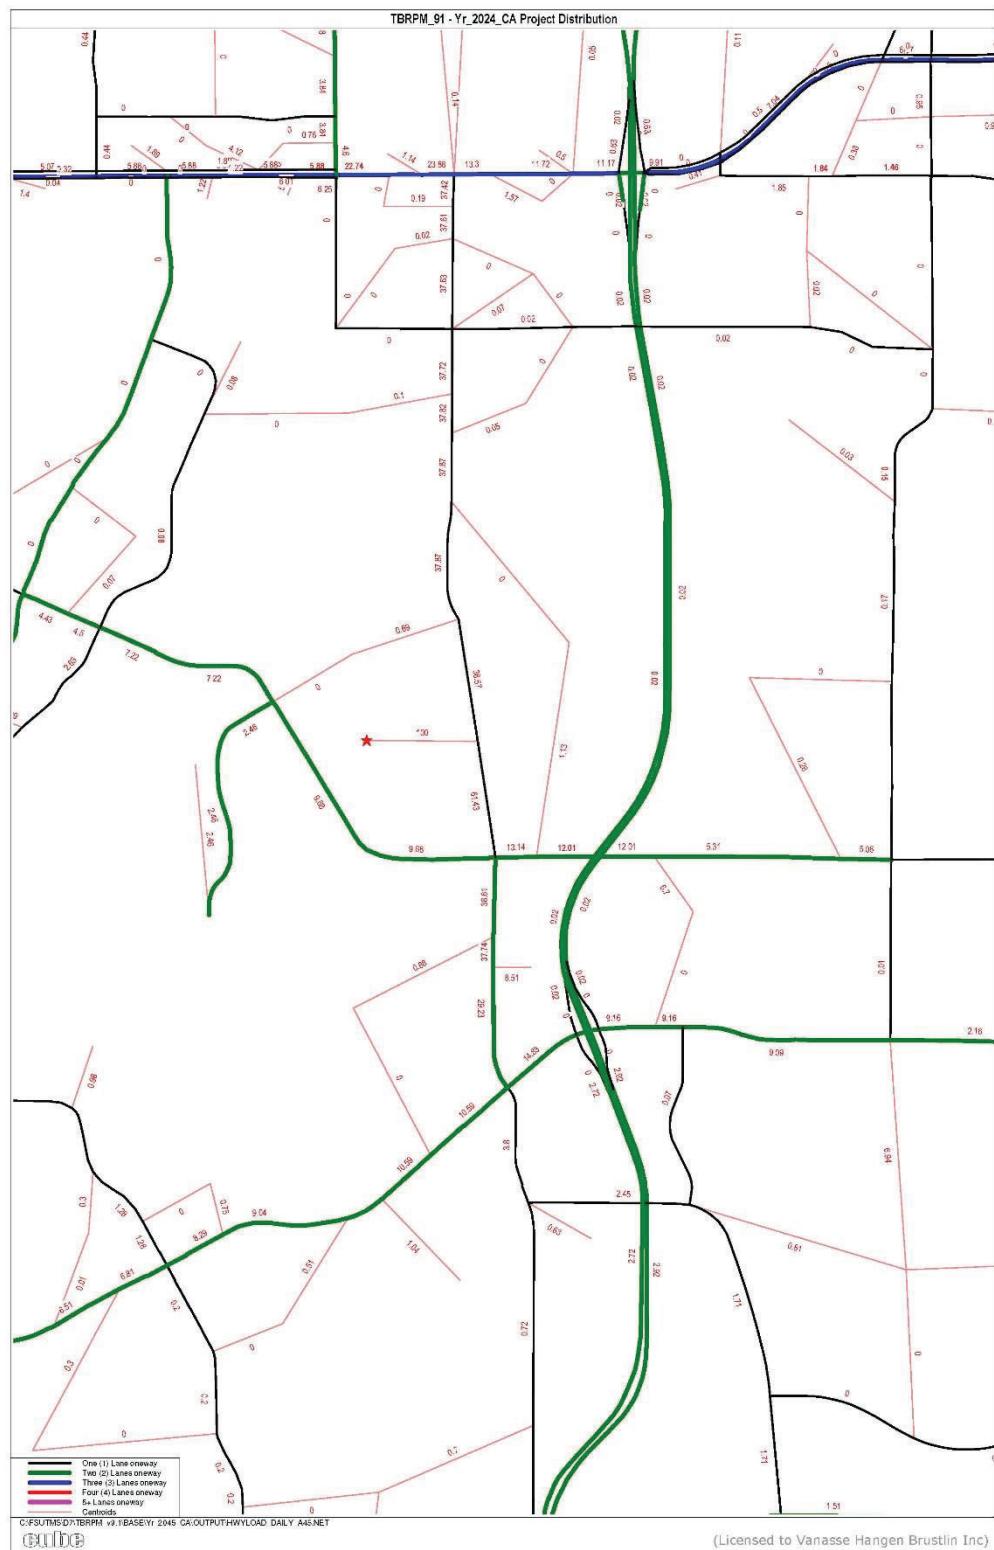

- Barclay Ave at Astaire Ln
- Barclay Ave at Eglin Blvd

Development Traffic Conditions

The project is proposed to be evaluated for the existing year of 2022 and for future project build out year of 2024. Future background volumes will be derived after reviewing historic growth rates, using the last 5 years of available AADT data. Any negative growth will be identified and a minimum of 0% per year growth applied. Based on conversations with County staff, the listed developments will be incorporated into this analysis as background traffic.

- Lucky Lane Residential
- Jumper Loop
- Village Van Gogh

Figure 3 – TBRPM Distribution

Data Collection / Existing Conditions

AM and PM peak-hour traffic counts will be assembled for the study roadway segments and intersections to establish existing traffic conditions. Roadway counts for all study roadways will be identified using the data within the *FTO Database*. Intersection turning movement counts will be collected for study intersections with a seasonal factor adjustment applied. The existing condition analysis will evaluate the current capacity of the study roadways identified within the Primary Impact Area. In addition, the study intersections will be analyzed using Synchro 11 and in accordance with the *Highway Capacity Manual* methodology.

Planned & Programmed Improvements

The study will be conducted based on the use of any roadway or intersection improvements that are within the study area and funded for construction within the first three-year of any agency work program/TIP. The Hernando County CIP lists the following projects:

- Barclay Avenue Multilaning (4-lane) from Powell to N San Antonio – Project #100380 – Funded for construction FY 2023
- Barclay Avenue Multilaning (4-lane) from SR 50 to Lucky – Project #100380 – Funded for construction FY 2023
- Traffic Signal Timing (Elgin from Barclay to Mariner) – Project # 500111 – Funded for FY 2023

Relevant pages from the TIP appendix G for Hernando County's CIP are attached.

Minimum Acceptable Level of Service

The level of service capacities will be derived from the FDOT Generalized LOS Tables utilizing the LOS D peak hour service volumes for County roads, and LOS C peak hour service volumes for State roads.

Traffic Report

As a result of the trip generation, trip distribution, and trip assignment previously mentioned, VHB will evaluate the adjacent transportation system to determine the necessary improvements and timing requirements to accommodate the project for the existing year 2022 and the build-out year 2024 traffic conditions. The assessment of roadway segments and intersection conditions will be conducted for the AM and PM peak-hour conditions. In addition to the level of service and delay reported for intersections, a queue length evaluation will also be conducted for exclusive turn lane needs at project driveways to determine the warrant and length of any turn lanes. The findings of the study will be documented in the traffic report. The traffic report will summarize study procedures, analyses performed, and recommendations, including exhibits to show existing, background, and future with project traffic volumes. Impacts resulting from project traffic will be identified with recommendations to mitigate adverse segments and intersection lane groups.
